The aviation asset tracking solution

AD-553u8 inlays from Avery Dennison is a top choice for tagging aviation baggage in accordance with IATA Resolution 753. The product provides excellent broadband (860-960 MHz) read range performance across multiple regions including Europe, Asia-Pacific and the Americas.

The 38 x 76mm design exhibits long distance read capture from all directions, regardless of tag-to-reader alignment and meets category performance requirements for Spec U under Auburn University's ARC testing program.

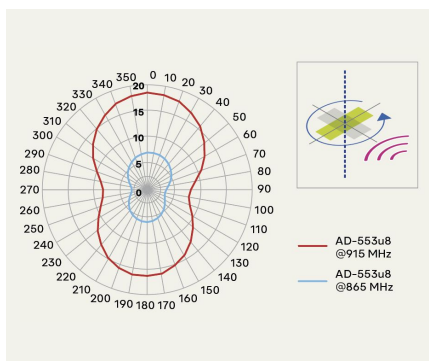

AD-553u8's UCODE 8 chip from NXP features 128-bit of EPC memory and a 96-bit unique factory-locked TID number. A 48-bit unique serial number is factory-encoded into the TID. Available delivery formats include both dry inlay and wet inlay.

Like all RFID products from Avery Dennison, AD-553u8 inlays are manufactured according to the industry's highest quality standards, as confirmed by the RFID Lab at Auburn University: The inspection body awarded Avery Dennison its first comprehensive and significant ARC accreditation for quality.
