## CAT3649 Evaluation Board User's Manual

ON Semiconductor®

<http://onsemi.com>

### EVAL BOARD USER'S MANUAL

#### Introduction

This document describes the CAT3649 evaluation board for the ON Semiconductor CAT3649 6-Channel Quad-Mode LED Driver with an Ambient Light Sensor circuit, NOA1211, that can control the LEDs intensity proportionally with the ambient light intensity.

The functionality and major parameters of the CAT3649 can be evaluated with the CAT3649 evaluation board.

A detailed description and electrical characteristics are available in the CAT3649 and NOA1211 datasheets.

#### Board Hardware

The evaluation board contains one CAT3649 in an application circuit driving a total of six LEDs and one NOA1211. The Ambient Light Sensor is connected to the LED driver via the C8051F321 microcontroller, which is illustrated in Figure 2.

Designator	Qty	Description	Value	Tolerance	Footprint	Manufacturer	Manufacturer Part Number	Substitution Allowed
R1	1	SMD Resistor	1/8 W, 100 kΩ	1%	0805	Vishay	RL0805K100-1	Yes
R2	1	SMD Resistor	1/8 W, 4.7 kΩ	1%	1210	Vishay	RL0805K004.7-1	Yes
R3	1	SMD Resistor	1/8 W, 180 Ω	1%	0805	Vishay	RL0805K180-1	Yes
R4, R5	2	SMD Resistor	1/8 W, 22 kΩ	1%	0805	Vishay	RL0805K022-1	Yes
R6	1	SMD Resistor	1/8 W, 100 kΩ	1%	0805	Vishay	RL0805K100-1	Yes
R7	1	SMD Resistor	1/8 W, 200 Ω	1%	0805	Vishay	RL0805E200-1	Yes
R10	1	SMD Resistor	1/8 W, 0.5 Ω	1%	0805	Yageo	RL0805FR-070R5L	Yes
J1 to J6, J8 to J11	10	3-pin Header Connector, 0.1", Single Strip	-	-	1.54 mm x 4.62 mm	MMM	2303-6211TG	Yes
J7	1	2-pin Header Connector, 0.1", Single Strip	-	-	1.54 mm x 3.08 mm	MMM	2302-6211TG	Yes
ISP	1	5-pin Header Connector, 0.1", Single Strip	-	-	1.54 mm x 7.70 mm	MMM	2305-6211TG	Yes
T1 – T8	8	Pin Receptacle (Test Points)	-	-	1.54 mm x 1.54 mm	Mil-Max	Various	Yes
K1	1	Slide Switch, SPDT	-	-	11.60 mm x 4.00 mm	E-Switch	EG1218	Yes
SW1, SW2	2	Pushbutton	-	-	3.50 mm x 6.00 mm	Schukat	DTS31N	Yes
BTH	1	Battery Holder 9 V	-	-	53.90 mm x 29.60 mm	Keystone	1294K-ND	Yes

\*All products listed are Pb-free.

## Operating Procedure

The CAT3649EVAL board can be configured in two operating modes: stand-alone or PC-controlled.

In both operating modes, the supply source for the VIN rail is selected by the jumper J10 to be either 5 V or 3.3 V. Table 2 shows the configurations for jumper J10 to set the VIN voltage.

**Table 2. VIN SELECTION**

J10	VIN
1 – 2	5 V
2 – 3	3.3 V

### Stand-alone

In this configuration, only the “Analog dimming” function can be tested.

The Ambient Light Sensor (ALS) is disabled in this mode.

The jumper J11 must be set in (2–3) position for stand-alone operation power.

The jumpers J8 and J9 must be set to (2–3) position to use onboard pushbuttons EN/DIS and ADIM.

The evaluation board can be powered either from an on-board 9 V supply (9 V alkaline battery) or from an external supply applied between VBAT and GND test points (located on the bottom side of the board, near the pins for the battery holder).

The EN/DIS pushbutton allows the user to enable or to shutdown the CAT3649 device.

The DIM pushbutton allows the user to program the LED current in 32 discrete values. On each press on this pushbutton, the “ADIM” input receives a 50 μs pulse. On the rising edge of the pulse, the LED current is decreased by 3.2% from full scale.

The user can obtain the same effect by continuously holding the DIM pushbutton down. For each 0.4 second interval, the “ADIM” input of the device will receive a pulse.

### PC Controlled

The CAT3649 EVAL board is equipped with a 8-bit microcontroller and can be connected to the PC via USB interface using a USB A/B type cable. This cable can be obtained from a local electronics supply store.

The jumper J11 must be set in (1–2) position for USB power operation.

The jumpers J8 and J9 must be set to (2–3) position to for control of EN/DIS, ADIM, and PWM via USB.

In this mode, the board is powered from the USB interface.

The GUI commands are described in the section “Graphical User Interface (GUI)”.

# CAT3649AGEVB

## Graphical User Interface (GUI)

After connecting the CAT3649 EVAL board to the PC via USB cable, the user can run the program CAT3649EVAL.exe.

If the program is started without the USB connection, the following message is displayed: “The CAT3649EVAL Board is not detected!”.

The CAT3649 operating mode is selected by pressing one of the “check” buttons “PWM” or “ADIM”.

### PWM Operation Mode

At start-up, on the GUI is selected, automatically, the PWM mode of operation (as shown on Figure 4).

In this mode, the user can increase/decrease the LEDs intensity by moving the potentiometer cursor or by pressing the keys “->” and “<-” on the keyboard after selection of the potentiometer.

Now, in the frame “CAT3649 Command Mode”, the PWM Timing Diagram for a frequency of 300 Hz is displayed. The period of a pulse (3.3 ms) is the sum between “Ton” and “Toff”.

### ADIM Operation Mode

After pressing the “ADIM” button, the “ADIM” frame becomes enabled (Figure 5). In the “CAT3649 Command Mode” frame, the Timing Diagram is only a line that represents the low level on the ADIM input.

If the “EN/DIS” button is pressed, the device will be enabled. The red LEDs on the GUI and on the board will light.

The Timing Diagram represents, now, the high level on the ADIM input. (Figure 6).

At this moment, the LEDs intensity is at full scale.

If the “DIM” button is pressed for a short time a single pulse is applied to the “ADIM” input of the device.

If the “DIM” button is pressed continuously, at every 0.4 seconds, a pulse is applied to the device. (Figure 7).

If the “EN/DIS” button is pressed again, the device will be disabled. The red LEDs on the GUI and on the board will be off.

At this moment, on the ADIM input is at the low level. (Figure 8).

The LEDs intensity is zero.

### Ambient Light Sensor NOA1211 Operation Mode

The Ambient Light Sensor NOA1211 can command the LEDs intensity using the microcontroller and the CAT3649.

If the option button “Select” of the frame of the Ambient Light Sensor is pressed while in PWM mode, the “Gain” frame will be enabled.

In this frame only the “Power Down” option is selected, because the “Ambient Light Sensor”, at this moment, is off. (Figure 9).

The user can select one of the options “Medium” or “Low” corresponding at the LED’s intensity level domain. (Figure 10). Depending of the light’s intensity exposed to the sensor, the LEDs will light proportionally.

Operating mechanism is as follows:

The sensor outputs a current proportional to the ambient light. This current is converted to an output voltage by resistor R6. The output voltage is applied to the input of the 10-bit ADC (Analog to Digital Converter) from the microcontroller.

The microcontroller converts the digital value, received from ADC, into a PWM signal applied to the CAT3649 LED Driver.

CAT3649 controls the six LEDs’ intensity.

### Status Box

This box displays various messages about the application status.

## CAT3649AGEVB

### TEST PROCEDURE FOR THE CAT3649AGEVB EVALUATION BOARD

1. Set the switch K1 in “OFF” position.
2. Verify that shunts are installed on jumpers J1 to J6 in the top position.
3. Verify that a shunt is installed on jumper J7.
4. Set a jumper shunt on the header-pin connector J11 in (1,2) position.
5. Set a jumper shunt on the header-pin connector J8 in (2,3) position.
6. Set a jumper shunt on the header-pin connector J9 in (2,3) position.
7. Set a jumper shunt on the header-pin connector J10 in (1,2) position.
8. Connect the “CAT3649EVAL” board to the PC through a USB serial interface cable.
9. Run the program “CAT3649 EVAL.exe”. On the PC’s screen appears the CAT3649EVAL GUI. The “CAT3649 EVAL” board will be powered up.
10. On the GUI, move the potentiometer cursor. On the board, the light intensity of the LEDs will change proportionally.
11. On the GUI, select the “Ambient Light Sensor” frame and then, the “Medium Gain” button. On the board, the light intensity of the LEDs will change proportionally with the ambient light.
12. On the GUI, unselect the “Ambient Light Sensor” frame.
13. On the GUI, select the CAT3649 ADIM and then, “EN/DIS” button. On the board the red LED and the white LEDs will light.
14. On the GUI, select the “DIM” button. On the board, the LEDs light intensity will decrease. At each selection of the “DIM” button, the LEDs light intensity will decrease.
15. On the GUI, select the “EN/DIS” button. On the board the red LED and the white LEDs will not light.
16. Push the “EXIT” button on the GUI.
17. Disconnect the USB interface cable from PC and “CAT3649 EVAL” board.
18. Insert a 9V battery in the battery holder.
19. Set a jumper shunt on the header-pin connector J11 in (2,3) position.
20. On the board, set the switch K1 in “ON” position.
21. On the board, push the “EN/DIS” button. The red LED and the white LEDs will light.
22. On the board, push the “DIM” button. the LEDs light intensity will decrease. At each selection of the “DIM” button, the LEDs light intensity will decrease.
23. On the board, push the “EN/DIS” button. The red LED and the white LEDs will not light.
24. On the board, set the switch K1 in “OFF” position.

The evaluation board/kit (research and development board/kit) (hereinafter the "board") is not a finished product and is not available for sale to consumers. The board is only intended for research, development, demonstration and evaluation purposes and will only be used in laboratory/development areas by persons with an engineering/technical training and familiar with the risks associated with handling electrical/mechanical components, systems and subsystems. This person assumes full responsibility/liability for proper and safe handling. Any other use, resale or redistribution for any other purpose is strictly prohibited.

**THE BOARD IS PROVIDED BY ONSEMI TO YOU "AS IS" AND WITHOUT ANY REPRESENTATIONS OR WARRANTIES WHATSOEVER. WITHOUT LIMITING THE FOREGOING, ONSEMI (AND ITS LICENSORS/SUPPLIERS) HEREBY DISCLAIMS ANY AND ALL REPRESENTATIONS AND WARRANTIES IN RELATION TO THE BOARD, ANY MODIFICATIONS, OR THIS AGREEMENT, WHETHER EXPRESS, IMPLIED, STATUTORY OR OTHERWISE, INCLUDING WITHOUT LIMITATION ANY AND ALL REPRESENTATIONS AND WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, AND THOSE ARISING FROM A COURSE OF DEALING, TRADE USAGE, TRADE CUSTOM OR TRADE PRACTICE.**

**onsemi** reserves the right to make changes without further notice to any board.

You are responsible for determining whether the board will be suitable for your intended use or application or will achieve your intended results. Prior to using or distributing any systems that have been evaluated, designed or tested using the board, you agree to test and validate your design to confirm the functionality for your application. Any technical, applications or design information or advice, quality characterization, reliability data or other services provided by **onsemi** shall not constitute any representation or warranty by **onsemi**, and no additional obligations or liabilities shall arise from **onsemi** having provided such information or services.

**onsemi** products including the boards are not designed, intended, or authorized for use in life support systems, or any FDA Class 3 medical devices or medical devices with a similar or equivalent classification in a foreign jurisdiction, or any devices intended for implantation in the human body. You agree to indemnify, defend and hold harmless **onsemi**, its directors, officers, employees, representatives, agents, subsidiaries, affiliates, distributors, and assigns, against any and all liabilities, losses, costs, damages, judgments, and expenses, arising out of any claim, demand, investigation, lawsuit, regulatory action or cause of action arising out of or associated with any unauthorized use, even if such claim alleges that **onsemi** was negligent regarding the design or manufacture of any products and/or the board.

This evaluation board/kit does not fall within the scope of the European Union directives regarding electromagnetic compatibility, restricted substances (RoHS), recycling (WEEE), FCC, CE or UL, and may not meet the technical requirements of these or other related directives.

FCC WARNING – This evaluation board/kit is intended for use for engineering development, demonstration, or evaluation purposes only and is not considered by **onsemi** to be a finished end product fit for general consumer use. It may generate, use, or radiate radio frequency energy and has not been tested for compliance with the limits of computing devices pursuant to part 15 of FCC rules, which are designed to provide reasonable protection against radio frequency interference. Operation of this equipment may cause interference with radio communications, in which case the user shall be responsible, at its expense, to take whatever measures may be required to correct this interference.

**onsemi** does not convey any license under its patent rights nor the rights of others.

LIMITATIONS OF LIABILITY: **onsemi** shall not be liable for any special, consequential, incidental, indirect or punitive damages, including, but not limited to the costs of requalification, delay, loss of profits or goodwill, arising out of or in connection with the board, even if **onsemi** is advised of the possibility of such damages. In no event shall **onsemi**'s aggregate liability from any obligation arising out of or in connection with the board, under any theory of liability, exceed the purchase price paid for the board, if any.

The board is provided to you subject to the license and other terms per **onsemi**'s standard terms and conditions of sale. For more information and documentation, please visit [www.onsemi.com](http://www.onsemi.com).
