

Electronics Notebook from Monk Makes

Product ID: 5586

Description

From famed author and kit-designer [Monk Makes](#) comes the Electronics Notebook. [Perfect for the boffin](#) in your life (or the inner-boffin you're harboring inside). Put your own ideas, diagrams, calculations & notes down in these 158 pages of engineering graph paper. It's spiral-bound so easy to use in lab or lay flat on a table.

The inner pages alternate with plain graph paper and a 'mock breadboard' that is great for documenting analog or digital circuitry – it's like a paper version of Fritzing. We imagine Simon Monk used this layout to design all of his book diagrams

Also comes with some handy reference sheets:

- Microcontroller programming cheat sheet
- Common circuits and calculations

- Pinouts
- Resistor color codes
- ASCII table
