

The Cardinal Cappuccino Crystal Oscillator LVDS/ LVPECL

Features

- 2.5V or 3.3V supply voltage- configurable
- 10MHz to 250MHz LVDS and LVPECL outputs- configurable
- Better than 2Hz tuning resolution
- Low power, typically 23mA LVDS and 54mA LVPECL
- Temperature range: -40°C to +85°C
- Stability: ± 25 / ± 50ppm
- Phase Jitter (12kHz – 20MHz) .9ps RMS

Applications

- Multimedia
- Computing
- Networking, etc.

Part Numbering Example: CJA E 7 L Z - A7 BR - XXX.XXX TS

CJA	E	7	L	Z	A7	BR	XXX.XXX	TS
SERIES	OUTPUT	PACKAGE STYLE	VOLTAGE	ADDED FEATURES	OPERATING TEMP.	STABILITY	FREQUENCY	TRI-STATE
CJA	L = LVDS	5 = 5 X 3.2	S = 2.5V	Z = Tape and Reel	A7 = -40°C to +85°C	BR = ± 25ppm		
	E = LVPECL	7 = 7 X 5	L = 3.3V			BP= ± 50ppm		TS = Tri-State

Specification

Waveform	LVDS/ LVPECL
Frequency	10MHz to 250MHz
Operating Temperature Range	-40°C to +85°C
Storage Temperature Range	-55°C to +125°C
Supply Voltage	2.5V, 3.3V
Frequency Stability vs. Temp. Range	±25ppm/ ±50ppm
Input Current	23/54mA
Phase Jitter	.9ps Typical
Start-Up Time	10ms Max
Enable/ Disable Input Voltage	VIH ≥ 0.7VDD or No Connection, VIL ≤ 0.3VDD or Ground
Aging/ Year	±3ppm Max

Description

The Cardinal Cappuccino crystal oscillator is based on a high performance integrated circuit designed for use in Cardinal's continued expanding leadership products in the programmable frequency control industry.

Cardinal's new Cappuccino design is today state of the art in oscillators. The Cappuccino line product features 10MHz to 1.5GHz with CJAL/ CJAE ranging 10MHz to 250MHz Output, 2.5V or 3.3V Supply Voltage, LVDS/ LVPECL commercial -20°C to +70°C and industrial temperature range -40°C to +85°C.

Cardinal's new CJAL/ CJAE series is competitively priced and has the lowest typical power consumption 23/54mA LVDS/ LVPECL (70% less power than the Fox XpressO™ oscillator), lowest jitter and best phase noise over 10kHz to 20MHz vs. the traditional fixed frequency quartz oscillators and Surface Acoustic Wave oscillators. Cardinal's programming centers utilize modern robotics, for testing, programming and 100% final testing as we do with all our programmable offerings. The Cardinal CJAL/ CJAE series line is offered in both ceramic and low cost plastic industry standard packages.

Cardinal's Cappuccino line fits in all applications requiring a reference frequency including Multimedia, Computing, Networking, consumer etc.

Absolute Maximum Ratings

Item	Symbol	Condition	Unit
Input Voltage	V _I	-0.5 to V _{DD} + 0.5	V
Output Voltage	V _O	-0.5 to V _{DD} + 0.5	V
Positive Supply Voltage	V _{DD}	4.2	V
Storage Temperature		-55 to +125	°C

DC Electric Characteristics (T = 25°C)

Unless stated otherwise, the data presented here was taken over the following parameters, V_{DD} = 3.3V ± 10% or 2.5V ± 5%, Ta = -40°C to +85°C (industrial)

Item	Symbol	Specification			
		Min	Typ	Max	Units
Power Supply (V _{DD} , GND pins)	V _{DD}	2.97	3.3	3.63	V

Performance Characteristic Curves

Unless otherwise specified, data is characterized over temperature range -40°C to +85°C and voltage range 2.2V - 3.63V.

I_{DD} vs. V_{DD}

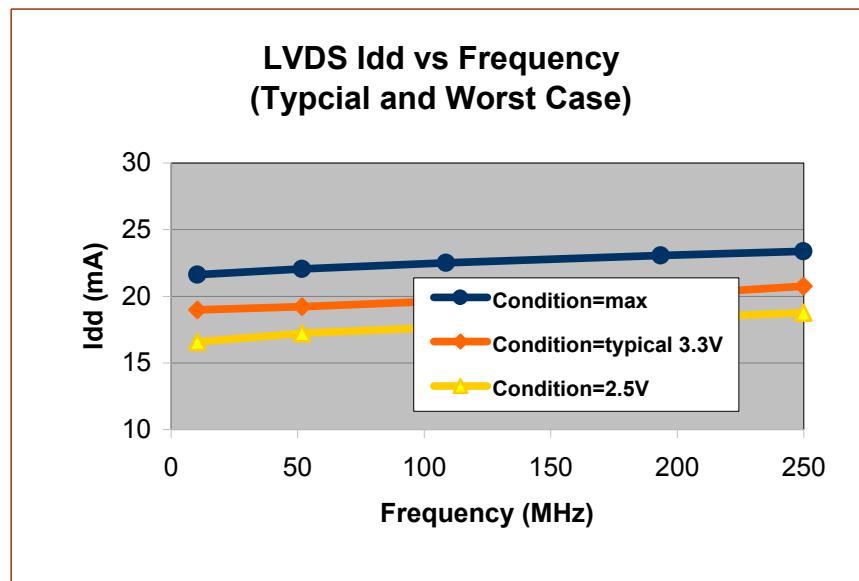

Figure 1. LVDS I_{DD} vs. Frequency, V_{DD}

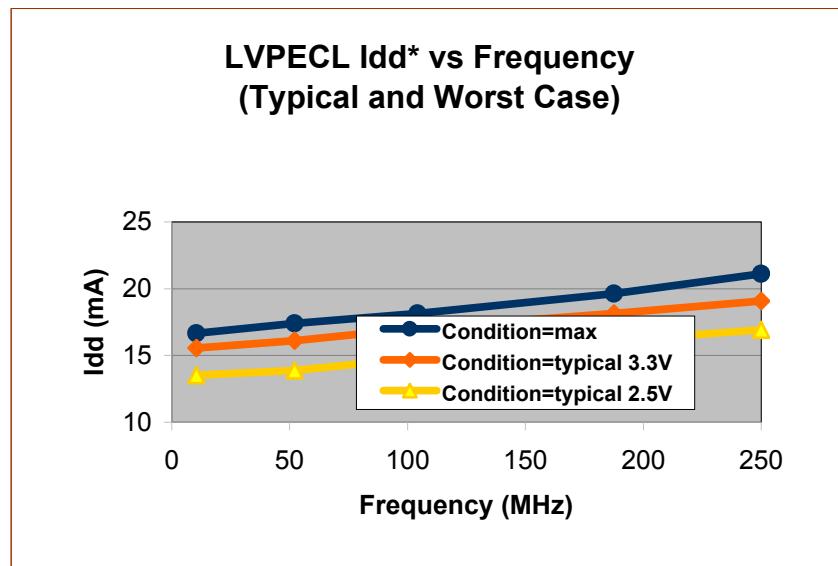

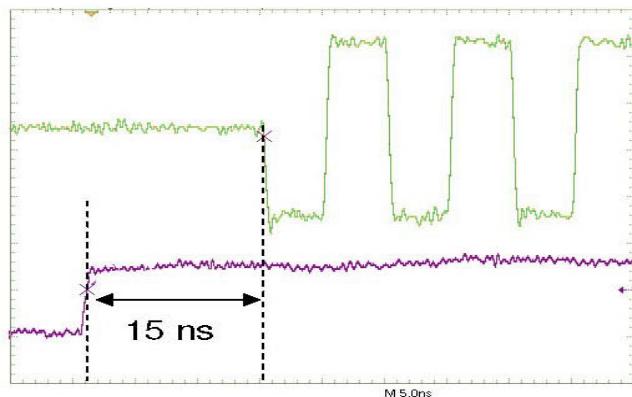

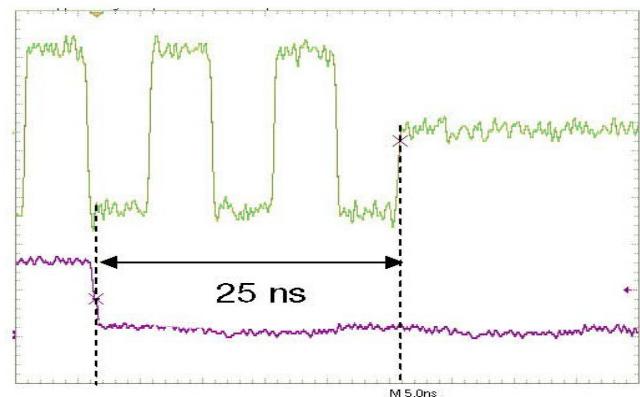

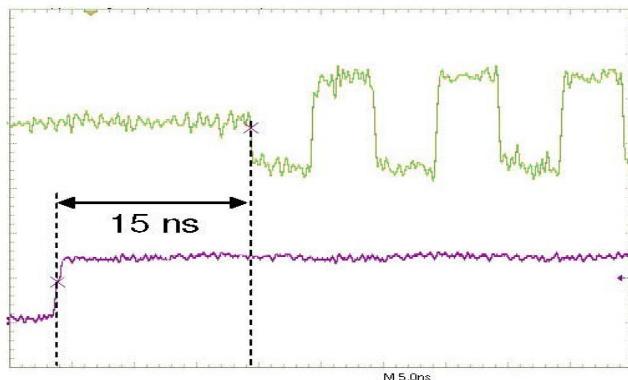

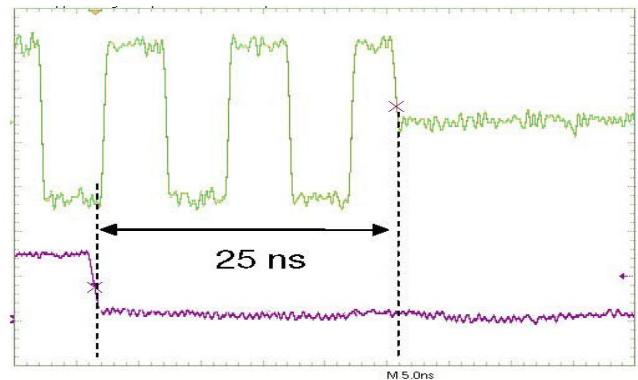

Figure 2. LVPECL I_{DD} vs. Frequency, V_{DD} , Temp.

*Note: LVPECL Idd does not include output load current
Add 32 mA to include output load current

OE Turn-on and Turn-off Times

Notes:

- These measurements were all performed with an AC coupled output so that leakage currents do not affect the timing of the measurement. This results in all outputs floating to the midpoint of the signal levels when off.
- When LVDS is disabled the output goes to the common mode voltage (approximately 1.25V).
- When LVPECL is disabled the output goes to tri-state level which floats to Vol.

Application Information

Termination for 3.3V LVPECL Output

The clock layout topology shown below is a typical termination for LVPECL outputs. The two different layouts offered are recommended only as guidelines.

OUT and nOUT are low impedance following outputs that generate LVPECL compatible outputs. Therefore, terminating resistors (DC current path to ground) or current sources must be used for functionality. These outputs are designed to drive 50Ω transmission lines. Matched impedance techniques should be used to maximize operating frequency and minimize signal distortion. Figures 13 and 14 present two different designs. They are recommended only as guidelines. Other suitable clock layouts may exist and it would be recommended that the board designer simulate to guarantee compatibility across all printed circuit and clock component process variations.

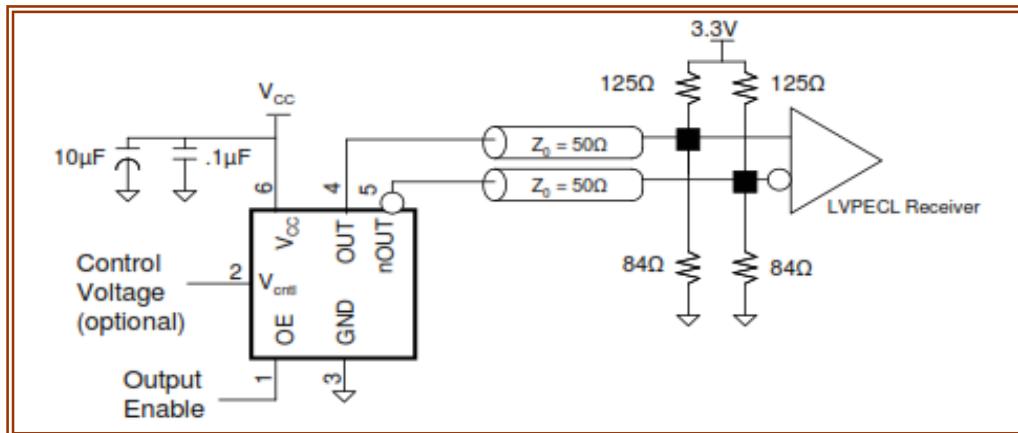

Figure 14. Alternante 3.3V LVPECL XO Application Schematic & Power Supply Decoupling

Termination for 2.5V LVPECL Output

Figure 15-17 shows examples of termination for 2.5V LVPECL drivers. These terminations are equivalent to terminating 50Ω to VCC-2V. For $V_{CC} = 2.5V$, the VCC-2V is very close to ground level. The 18Ω in Figure 16 can be eliminated and termination is shown in Figure 17.

Recommended Solder Profile for
Cardinal Components, Inc.
Package Infared Reflow.
Do Not Use Ultrasonic-Wave Soldering or
Wave Solder with Package Immersed in Solder
Damage to Crystal will result.

Reliability

Cardinal Components Inc., qualification includes aging at various extreme temperatures, shocks and vibration, temperature cycling, and IR reflow simulation. The Cappuccino family meets the following qualification tests:

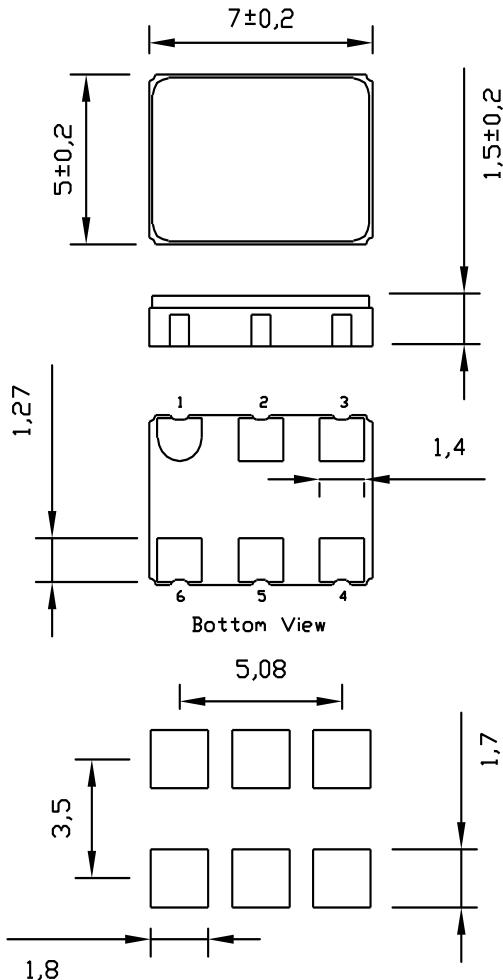

Environmental Compliance	
Parameter	Conditions
Mechanical Shock	MIL-STD-883, Method 2002
Mechanical Vibration	MIL-STD-883, Method 2007
Solderability	MIL-STD-883, Method 2003
Gross and Fine Leak	MIL-STD-883, Method 1014
Resistance to Solvents	MIL-STD-883, Method 2016
Moisture Sensitivity Level	IPC/ JEDEC J-STD-020, MSL1

Handling Precautions

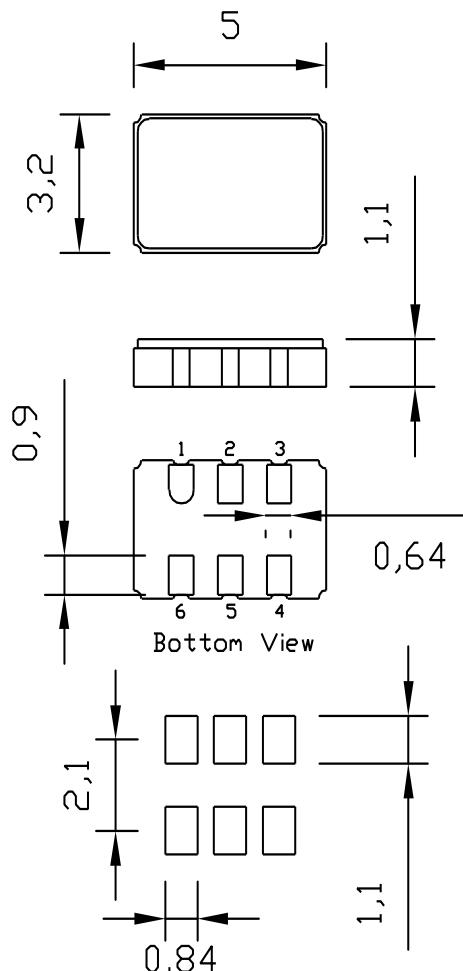

Although ESD protection circuitry has been designed into the Cappuccino proper precautions should be taken when handling and mounting. Cardinal employs a human body model (HBM) and a charged-device model (CDM) for ESD susceptibility testing and design protection evaluation.

ESD Ratings		
Model	Minimum	Conditions
Human Body Model	1000V	MIL-STD-883, Method 3015
Charged Device Model	900V	JEDEC, JESD22-C101
Machine Model	200V	JEDEC, JESD22-A115-A
