Features

Evaluation Module

- Evaluation platform for RPL-3.0 Buck Regulator Module
- Thermal design considerations included
- EMI Class A filter
- Easy evaluation of output voltage selection, control, power good and sensing functions

RECOM
Evaluation Module

RPL-3.0-EVM-1

Description

The RPL-3.0-EVM-1 generates a constant output voltage selectable from 1.8V, 3.3V, or 5V from a DC input in the range of 4 – 18V. It has a maximum continuous output current of 3 A.

All the functions of the RPL-3.0 such as output voltage selection, control, power good, and output sense can be readily evaluated. Also the behavior in overload or over-temperature can be evaluated easily before it is designed in.

The evaluation board also contains the filter components to meet EMC Class A levels. Alternate component positions are included to allow experimentation to optimize the EMC performance depending on operating conditions and budget.
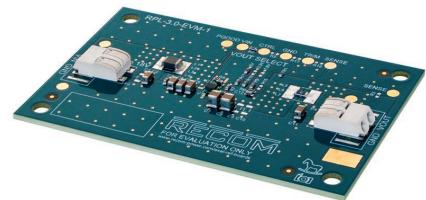

Selection Guide

Part Number	Input Voltage Range [VDC]	Output Voltage [1] [VDC]	Output Current max. [A]
RPL-3.0-EVM-1	4.0 - 18	1.8	3
	4.5 - 18	3.3	
	6.5 - 18	5	

Notes:

Note1: refer to SAFE OPERATING AREA of RPL-3.0 datasheet

Quick Start Guide

1. Connect P3 to power supply (observe correct polarity!)

2. Connect P4 to the load (no load operation is allowed)

3. The evaluation module is preset to 5Vout.
   The output voltage can be selected with values of 1.8V, 3.3V, and 5V by shorting a 0Ω resistor to the respective places as seen in the board silkscreen.

4. The sense pin is connected to the RPL output pin, so the preset voltage is very accurate at the output of the RPL. To compensate any losses of the filter, remove the resistor at R1, and solder a zero ohm resistor at R3.

5. CTRL
   The device is preset as normally on. It can be disabled by pulling the CTRL pad to GND. Short R5 to disable the device.

Caution:
ESD sensitive. Always follow ESD preventative procedures when handling the product!

Component Placement
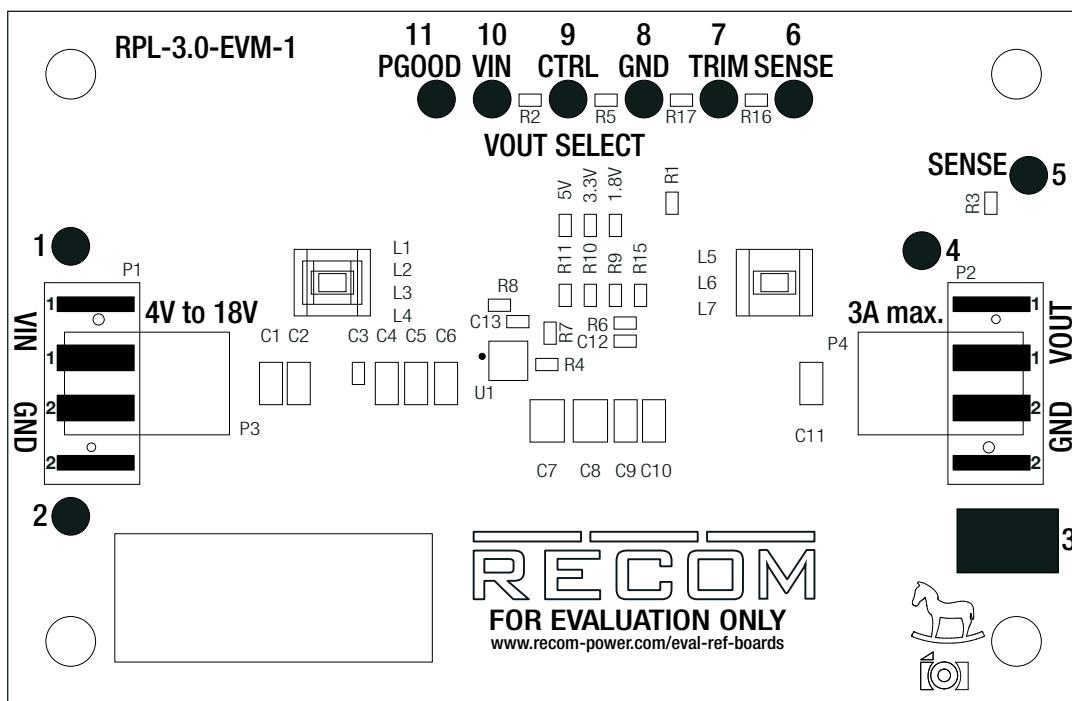

Connector Description

P1 (Not Mounted)

Pin	Name	Description
1	NC	No Connection
2	NC	No Connection

P2 (Not Mounted)

Pin	Name	Description
1	NC	No Connection
2	NC	No Connection

P3

Pin	Name	Description
1	VIN	Positive Input Voltage (observe correct polarity!)
2	GND	Common GND

P4

Pin	Name	Description
1	VOUT	Positive Output Voltage
2	GND	Common GND

Pads Direct Connection

Pin	Name	Description
1	VIN	Positive Input Voltage
2	GND	Negative Input Voltage (GND)
3	GND	Negative Output Voltage (GND)
4	VOUT	Positive Output Voltage
5,6	SENSE	Output Voltage Sense Pin (leave open if not used)
7	TRIM	TRIM Pad (leave open if not used)
8	GND	Negative Input Voltage (GND)
9	CTRL	CTRL Pad (leave open if not used)
10	VIN	Positive Input Voltage
11	PGOOD	Power Good Signal

Specifications (measured @ Ta= 25°C, full load and after warm-up unless otherwise stated)

Schematic
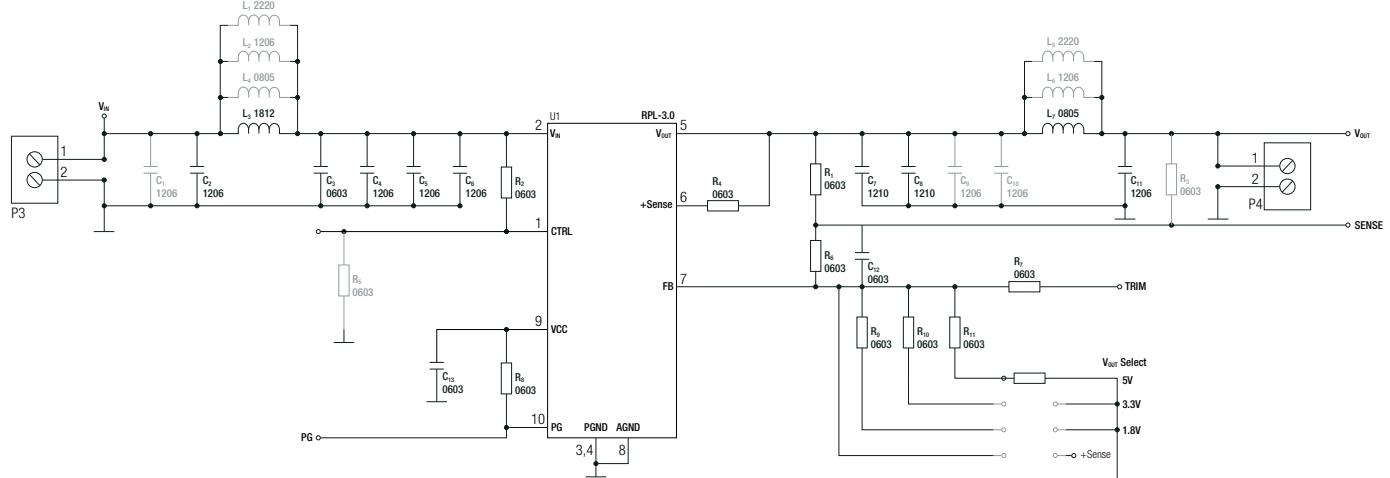

Notes:

Note2: Gray colored components are not mounted

Description

U1: RPL-3.0 power module.

C1,C2,L1,L2,L3,L4,C3,C4,C5,C6: allow placement of various sized components to test input filter design. The populated filter is designed to meet EN55022 class A. Note: Connect a 220uF across the input for damping the LISN.

C7,C8,C9,C10,L5,L6,L7,C11: allow placement of various sized components to test output filter design. The populated filter is designed to meet EN55022 class A. Note: Connect a 220uF across the input for damping the LISN.

R2 and R5: configure CTRL. R2 is populated to enable the RPL-3.0. Short R5 in order to disable the RPL-3.0.

R1: populated zero ohm resistor for direct output voltage measurement. If sense is desired at a different location, for example after the filter or directly at the load, unsolder R1, and connect sense to the new measurement point.

R3: sense point for output voltage after the filter. To set sense point here, remove R1 and solder a zero ohm resistor at R3.

VOUT Selection: the output voltage can be selected with values of 1.8V, 3.3V, and 5V by shorting a zero ohm resistor to the respective places as seen in the board silkscreen.

R16, R17: trim the output voltage. Refer to *"OUTPUT VOLTAGE TRIMMING"*

OUTPUT VOLTAGE TRIMMING

The RPL-3.0 offers the feature of trimming the output voltage by using external trim resistors. The values for trim resistors are shown in trim tables below according to E96 values; therefore, the specified voltage may slightly vary. Refer to **"Selection Guide"** for applicable Vout range.

Trim up

Trim ○← ──────┐
            │
          R_{up} (R17)
            │
GND ○← ──────┘

Trim down
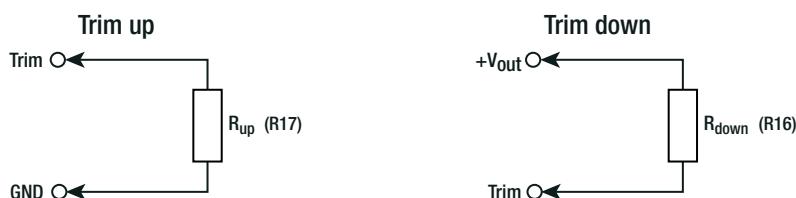

+V_{out} ○← ──────┐
               │
             R_{down} (R16)
               │
Trim ○← ──────┘

Calculation:

$Vout_{nom}$ = nominal output voltage [VDC]
$Vout_{set}$ = trimmed output voltage [VDC]
V_{ref} = reference voltage [VDC]
R_{up} = trim up resistor [kΩ]
R_{down} = trim down resistor [kΩ]
R_{HI}, R_{LO} = internal resistors [kΩ]

R_{HI}	R_{LO}	V_{ref}
37k6Ω	47kΩ	0.8VDC

$$R_{up} = \left[\frac{R_{HI}}{Vout_{set} - V_{nom}} \right] - 1k \qquad R_{down} = \left[\frac{(Vout_{set} - V_{ref}) \times R_{LO}}{Vout_{nom} - V_{set}} \right]$$

Practical Example, trim up:

$Vout_{set}$ = 5.1VDC

$$R_{up} = \left[\frac{37k6Ω}{5.1 - 5} \right] - 1k = \underline{376kΩ}$$

R_{up} according to E96 ≈ **374kΩ**

Practical Example, trim down:

$Vout_{set}$ = 4VDC

$$R_{down} = \left[\frac{(4 - 0.8) \times 47kΩ}{5 - 4} \right] = \underline{150k4Ω}$$

R_{down} according to E96 ≈ **150kΩ**

$Vout_{set}$ = 1.8V

Trim up

$Vout_{set}$ =	1.82	1.88	1.90	1.98	[VDC]
R_{up} (E96) ≈	1M87	464k	374k	210k	[Ω]

Trim down

$Vout_{set}$ =	1.7	1.6	1.5	1.44	[VDC]
R_{down} (E96) ≈	422k	187k	110k	84k5	[Ω]

$Vout_{set}$ = 3.3V

Trim up

$Vout_{set}$ =	3.4	3.5	3.6	3.63	[VDC]
R_{up} (E96) ≈	374k	187k	124k	113k	[Ω]

Trim down

$Vout_{set}$ =	3.1	3	2.8	2.64	[VDC]
R_{down} (E96) ≈	536k	340k	187k	130k	[Ω]

$Vout_{set}$ = 5V

Trim up

$Vout_{set}$ =	5.1	5.2	5.3	5.5	[VDC]
R_{up} (E96) ≈	374k	187k	124k	75k	[Ω]

Trim down

$Vout_{set}$ =	4.7	4.5	4.3	4	[VDC]
R_{down} (E96) ≈	619k	348k	237k	150k	[Ω]
