

The diagram illustrates the assembly of an AMPMODU System 50 header. It shows a base header with a row of 50 pins. On top of this header, two different configurations of plain housings are shown. The first configuration consists of two housings stacked side-by-side, each with a row of 25 pins. The second configuration consists of two housings stacked end-to-end, each with a row of 50 pins. A label 'Post Removed' points to a specific pin on the header, indicating that the housing is designed to be mounted without that pin. The housings have a wavy top edge and a series of small rectangular openings for the pins.

Plain Housings,
Stacked Side-to-Side
(See Note 1.)

Plain Housing,
Stacked End-to-End
(See Notes
1 & 2.)

Post Removed

AMPMODU System 50 Header, Unshrouded
(Straight Post shown for ref. only.)
