

R7 Dual-Layer Rubber Worksurface Mat

Meets ANSI/ESD S20.20 worksurface required limit (and recommendation of ANSI/ESD STM4.1-2017) tested per ANSI/ESD STM4.1-2017 and ESD TR53. Resistance to solvents, hot solder and soldering irons makes the R7 Dissipative Dual-Layer Rubber Worksurface Mat a versatile static-safe worksurface. Electrical performance is accomplished by using a two-layer nitrile rubber combination of a static dissipative nitrile rubber colored top with a conductive nitrile rubber black bottom. Compatible with Continuous Workstation Monitors. Available in rolls, and mat kits.

Grounding: This material must be properly grounded for optimum electrical performance. See [Grounding Cords](#).

Cleaning: For optimum electrical performance, surface must be cleaned regularly using a recommended ESD mat cleaner. Do not use cleaners with silicone. Silicone buildup will create an insulative film on the surface.

*Color, texture and thickness may vary between lots and mills. Matting materials have a tendency to shrink slightly when first unrolled. In applications where length is critical, allow the material to condition for at least 4 hours before cutting to size. Always using care, trim with a sharp knife or razor blade.
