MP62180/MP62181
3.3V/5V, Single-Channel 2A Current-Limited Power Distribution Switch

The Future of Analog IC Technology

DESCRIPTION

The MP62180/MP62181 Power Distribution Switch features internal current limiting to prevent damage to host devices due to faulty load conditions. The MP62180/MP62181 operates from a 3.3V or 5V nominal input voltage and includes an 85mΩ Power MOSFET to handle up to 2A continuous load with a 2.8A typical current limit. The MP62180/MP62181 has built-in protection for both over current and increased thermal stress. For over-current protection (OCP), the device will limit the current by going into a constant current mode.

When continuous output overload condition exceeds power dissipation of the package, the thermal protection will shut the part off. The device will recover once the device temperature reduces to approx 120°C.

The MP62180/MP62181 is available in QFN8E, MSOP8E and SOIC8 packages.

FEATURES

- 2A Continuous Current
- 2.8A accurate Current Limit
- 2.7V to 5.5V Supply Range
- 90uA Quiescent Current
- 75mΩ MOSFET
- Thermal-Shutdown Protection
- Under-Voltage Lockout
- 8ms FLAG Deglitch Time
- No FLAG Glitch During Power Up
- Reverse Current Blocking
- Active High & Active Low Options

APPLICATIONS

- Smartphone and PDA
- Portable GPS Device
- Notebook PC
- Set-top-box
- Telecom and Network Systems
- PC Card Hot Swap
- USB Power Distribution

"MPS" and "The Future of Analog IC Technology" are Registered Trademarks of Monolithic Power Systems, Inc.

TYPICAL APPLICATION

SINGLE-CHANNEL
* EN is active high for MP62181

ORDERING INFORMATION

Part Number	Enable	Switch	Maximum Continuous Load Current	Typical Short-Circuit Current @ T_A=25C	Package	Top Marking	Free Air Temperature (T_A)
MP62180DS	Active Low	Single	2A	2.8A	SOIC8	62180DS	–40°C to +85°C
MP62180DD					QFN8E (2mm x 3mm)	62180DD	
MP62180DH					MSOP8E	62180DH	
MP62181DS	Active High				SOIC8	62181DS	
MP62181DD					QFN8E (2mm x 3mm)	62181DD	
MP62181DH					MSOP8E	62181DH	

* For Tape & Reel, add suffix –Z (e.g. MP62180DH–Z).

For RoHS Compliant Packaging, add suffix –LF (e.g. MP62180DH–L)

PACKAGE REFERENCE

MSOP8E	QFN8E (2mm x 3mm)	SOIC8

MP62180

*: EN is active high for MP62181
ABSOLUTE MAXIMUM RATINGS [1]

IN ....-0.3V to +6.0V
EN, FLAG, OUT to GND ....-0.3V to +6.0V
Continuous Power Dissipation   (T_A = +25°C) [2]
MSOP8E.. 2.3W
QFN8E (2mm x 3mm)............................. 2.3W
SOIC8 .... 1.4W
Junction Temperature.............................150°C
Lead Temperature ....260°C
Storage Temperature...............–65°C to +150°C
Operating Temperature..............–40°C to +85°C

Thermal Resistance [3] $θ_{JA}$ $θ_{JC}$

MSOP8E................................. 55 ...... 12... °C/W
QFN8E (2mm x 3mm) .... 55 ...... 12... °C/W
SOIC8 .... 90 ...... 42... °C/W

Notes:
1) Exceeding these ratings may damage the device.
2) The maximum allowable power dissipation is a function of the maximum junction temperature T_J(MAX), the junction-to-ambient thermal resistance $θ_{JA}$, and the ambient temperature T_A. The maximum allowable continuous power dissipation at any ambient temperature is calculated by P_D(MAX)=(T_J(MAX)-T_A)/$θ_{JA}$. Exceeding the maximum allowable power dissipation will cause excessive die temperature, and the regulator will go into thermal shutdown. Internal thermal shutdown circuitry protects the device from permanent damage.
3) Measured on JESD51-7, 4-layer PCB.

ELECTRICAL CHARACTERISTICS [4]

V_{IN}=5V, T_A=+25°C, unless otherwise noted.

Parameter	Condition		Min	Typ	Max	Units
IN Voltage Range			2.7		5.5	V
Supply Current	Device Active, I_{OUT}=0			90	120	µA
Shutdown Current	Device Disable, V_{OUT}=float, V_{IN}=5.5V			1		µA
Off Switch Leakage	Device Disable, V_{IN}=5.5V			1		µA
Current Limit			2.1	2.8	3.5	A
Trip Current	Current Ramp (slew rate≤100A/s) on Output			3.1	4	A
Under-voltage Lockout	Rising Edge		1.95		2.65	V
Under-voltage Hysteresis				250		mV

Figure2—Function Block Diagram

DETAILED DESCRIPTION

Over Current

When the load exceeds trip current (minimum threshold current triggering constant-current mode) or a short is present, MP62180/MP62181 switches into to a constant-current mode (current limit value). MP62180/MP62181 will be shutdown only if the overcurrent condition stays long enough to trigger thermal protection.

Trigger overcurrent protection for different overload conditions occurring in applications:

1) The output has been shorted or overloaded before the device is enabled or input applied. MP62180/MP62181 detects the short or overload and immediately switches into a constant-current mode.

2) A short or an overload occurs after the device is enabled. After the current-limit circuit has been tripped (reached the trip current threshold), the device switches into constant-current mode. However, high current may flow for a short period of time before the current-limit circuit can react.

3) Output current has been gradually increased beyond the recommended operating current. The load current rises until the trip current threshold is reached or until the thermal limit of the device is exceeded. The MP62180/MP62181 is capable of delivering current up to the trip current threshold without damaging the device. Once the trip threshold has been reached, the device switches into its constant-current mode.

Flag Response

The FLAG pin is an open drain configuration. This FAULT will report a fail mode after an 8ms deglitch timeout. This is used to ensure that no false fault signals are reported. This internal deglitch circuit eliminates the need for extend components. The FLAG pin is not deglitched during an over temp. or a voltage lockout.

Thermal Protection

The purpose of thermal protection is to prevent damage in the IC by allowing exceptive current to flow and heating the junction. The die temperature is internally monitored until the thermal limit is reached. Once this temperature is reached, the switch will turn off and allow the chip to cool. The switch has a built-in hysteresis.

Under-voltage Lockout (UVLO)

This circuit is used to monitor the input voltage to ensure that the MP62180/MP62181 is operating correctly.

This UVLO circuit also ensures that is no operation until the input voltage reaches the minimum spec.

Enable

The logic pin disables the switch to reduce overall supply current .Once the EN pin reaches logic enable threshold, the MP62180/MP62181 is enabled.
APPLICATION INFORMATION

Power-Supply Considerations

Over 10µF capacitor between IN and GND is recommended. This precaution reduces power-supply transients that may cause ringing on the input and improves the immunity of the device to short-circuit transients.

In order to achieve smaller output load transient ripple, placing a high-value electrolytic capacitor on the output pin(s) is recommended when the load is heavy.
