For the mounting of PCBs, it should be noted that the rated data relates only to the PCB components alone.

The necessary creepage and clearance paths must be observed in connection with the respective applicant in accordance to IEC 664 / VDE 0110. The current-carrying capacity and pitch tolerance is to be determined according to DIN IEC 326 part 3 very fine.

Weidmueller PCB components are tested according to the DIN EN 61984 or to the DIN EN 60947-7-4 standard, and are valid for its field of application. Provided that the components are used to the intended purpose, all requirements with respect to the occurring of electrical, mechanical, thermic and corrosive stress will be satisfied.

## Recommended reflow soldering profile

### Reflow soldering profile

The perfect soldering profile for SMT Surface Mount Technology is one the most exiting question in SMT production. But there are more than one correct answer: The diagram of temperature-on-time is related to processing features of solder paste and to maximum load of components.

We have to consider the following parameters:

- Time for pre heating
- Maximum temperature
- Time above melting point
- Time for cooling
- Maximum heating rate
- Maximum cooling rate

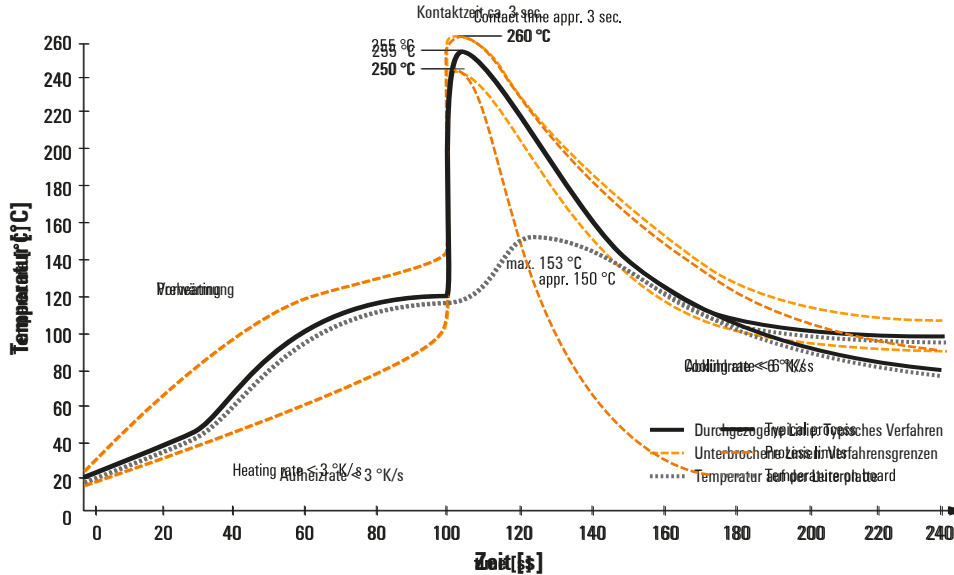

We recommend a typical solder profile with associated process limits. With preheating components and board are prepared smoothly for the solder phase. Heating rate is typically  $\leq +4\text{K/s}$ . In parallel the solder paste is ‚activated‘. The time above melting point of  $217\text{°C}$  the paste gets liquid and components and boards begin to connect. The maximum temperature of  $245\text{°C}$  to  $254\text{°C}$  should stay between 10 and 40 seconds. In the cooling phase at  $\geq -6\text{K/s}$  solder is cured. Board and components cool down while avoiding cold cracks.

**Single Wave:**

**Doppel Wave:**

**Wellenlötprofilvorgaben**

Wired connection elements should be processed in accordance with the DIN EN 61760-1 standard. We have included two recommendations for practical wave soldering profiles, with which Weidmüller PCB terminals and connectors are qualified. Bedrahtete Anschlüsselemente sind in Anlehnung an die Norm DIN EN 61760-1 zu verarbeiten. Dabei sind zwei Empfehlungen für praxisbezogene Wellenlötprofile, mit denen Leiterplattenanschlussklammern und Steckverbinder von Weidmüller qualifiziert sind.

When choosing a suitable profile for your application, the following factors also need to be considered: Bei der Wahl eines passenden Profils für Ihre Anwendung sind unter anderem folgende Faktoren zu beachten:

- Stärke der Leiterplatte
- Anzahl der Schichten
- Anzahl der Solderlagen
- Ein-/Beidseitige Bestückung
- Produktspektrum
- Heating and cooling rates
- Aufheiz- und Abkühlrate

The single and double wave profiles each indicate the recommended operating range, including the maximum soldering temperature of 260°C. In practice, the maximum soldering temperature is quite often well below the above range. Die Einzel- und Doppelwelle zeigt jeweils den empfohlenen Verarbeitungsbereich inkl. der maximalen Löttemperatur von 260°C. In der Praxis liegt die maximale Löttemperatur sehr häufig weit unter dem o.g. Maximalprofil.
