SKU:OKY3551

Name:　　　　　　Limited Collision Switch End Stop For 3D Printer Wiring

Description:

Switch Collision module and digital interface with 13 LEDs to build a simple circuit, make exhibitionist collision The collision sensor is connected to the digital interface 3 with the LED of the digital interface 13. When the collision sensor detects the signal of collision, the main board and the module LED light up simultaneously.

Package List:

1 * Limited Collision Switch
