## **Product Change Notice on L17SM2\***

Dear valued customers,

Since more and more plating factories adjusted their business due to stricter environmental protect policy implemented by local government this year, our partner was involved as well and now they can't continue to provide us the current pure tin plating for the terminal female pins that relates to our series of SMT (note: all the PNs start with L17SM2). As a result, our factory has to make an immediate transfer to Mat Tin plating which is much popular always in the plating industry.

This change would not impact any functions or reliabilities. The Mat Tin plating has better performance on decreasing tin whisker risk than the Pure Tin version though the color of Mat Tin looks darker.

Surely we would send out the update drawings soon and communicate with each customer in separate as follow up to get your approval before the production.

Lastly we are very sorry for the short notice and thank you for your understanding in advance.

Yours sincerely

Cathy Zhao

Global Product Manager, Dsub
