CEL California Eastern Laboratories

Date: June 24, 2015
To: CEL MeshConnect USB Stick Customers
Subject: PCN # ZBP20150624A – USB Stick Updates
Effective Date: August 1, 2015

This Product Change Notification is to inform CEL customers that minor functional enhancements are planned for the following part numbers:

- ZM357S-USB, ZM357S-USB-LR

These changes are planned for parts marked with lot codes 1532x and later.

What does this mean to CEL Customers?

- Hardware
  - The color of the plastics will be changing from blue to black.
  - Hardware flow control through the USB port will be enabled to support Silicon Labs images using network coprocessor mode. It will now be possible to use EZSP UART images built with hardware flow control (RTS/CTS) in addition to software flow control (XON/XOFF).
  - The USB Stick will no longer go to sleep when disconnected from a computer USB port if the USB supply voltage is present. This will enable the USB Stick to be powered directly through a standard USB A/C power adapter.

- Software
  - A new USB Stick driver will be required. Please visit the CEL website at http://meshconnect.cel.com/products/usb-sticks/em357-usb-lr to download the latest driver. Drivers are available for Windows, Mac, and Linux.

- Certification
  - No changes to the certifications of these modules

If you have any inquiries, please contact your CEL sales representative.

Thank you for your business,
