## Commercial Property Mon. Kit, Cellular Interface

### General Description

This kit contains a complete IoT sensor network. It is the ideal solution to remotely monitor commercial property doors and temperatures. It features the Smart.Hub (Pro, Cellular version) with power supply and antennas for cloud connectivity and (4) Whisker.Block® sensor modules. Two of the sensor blocks contain internal thermistors for measuring ambient air temperature at the sensor block location.

Each of the other (2) Sensor Blocks has the following features:

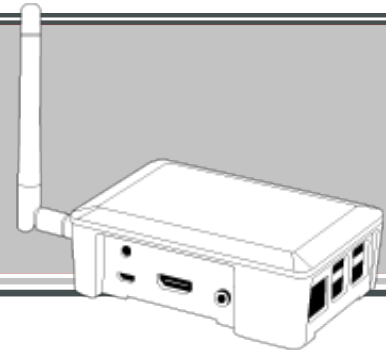

- A door sensor that connects to a dry contact input for measuring open/closed status.
- An internal temperature sensor to measure the ambient temperature of the Whisker.Block® location.

This bundle contains the following components:

Quantity	Part Number	Description	
1	WH1-9-00-PDNCN-N	Smart.Hub™ Pro, Cellular Interface Whisker.io™, Smart.Hub™, Pro, 900MHz, Cellular, 120VAC	
2	WB1-9-00-NNNNNNNN-0000-LR	Whisker.Block®, Internal Temp 900MHz, battery powered, int. antenna, int. temperature	
2	WB1-9-00-DCNNNNNN-0000-LR	Whisker.Block®, Dry Contact Digital Input 900MHz, battery powered, int. antenna, int. temperature, ext. dry contact input qty. (1)	
2	WBP_SC_0010_01	Sensor Cable / Door Sensor	

# WH1-9-00-PDNCN-N

## Smart.Hub™ Pro, Cellular Interface

### General Description

The Smart.Hub™ Pro is a versatile and reliable IOT gateway device for use in indoor applications. Smart.Hub™ products are gateways used to move data from Whisker.Block® sensor blocks and end user customized Whisker.Engine™ based sensor nodes to the Whisker.io™ cloud platform.

### Features

- Plug and play operation
- Ethernet & Cellular options
- Data buffering during loss of connectivity
- Supports all Whisker.io Cloud services
- Works with 3rd party platforms via Whisker.io Forwarding
- Supports two-way communication with field devices – monitor and control
- Communicate with field devices over distances more than 1.6 kilometers.

### Robustness and Reliability

If the hub loses connectivity to the Internet, it will buffer all incoming messages from field devices to storage on the SD card. When hub connectivity is restored, the messages will be sent to the cloud for storage and forwarding. In the event of catastrophic failure, the data on the SD card can be recovered using our Data Recovery App (Windows).

### Throughput

The number of devices that can be supported by this hub varies with the reporting rate of the connected devices. This is a single channel hub, which ultimately determines its limitations; with a single channel, this hub can process about 1,800 messages an hour. The following table estimates device capacity for several different update rates.

Update Rate	Estimated number of devices
5 Minutes	250
1 Hour	1500
4 Hours	5000
24 Hours	10000

This hub supports two-way communications with field devices that support the Whisker.io™ protocol. For battery powered devices, the hub will queue down-stream messages (commands) and send them to the device when it reports in at its sampling interval; therefore, the command latency is equivalent to the update rate of the device. For line powered devices, commands are sent immediately, with a latency of less than 1 second.

### Whisker.io Services

#### Storage

Devices that are configured with the storage service will persist their historic data in the Whisker.io cloud, making it available for visualization and analysis using our Whisker.io™ Portal web-based software.

#### Alerting

Rules based alerting allows a text or email to be sent when the specified condition is met and when it clears.

#### Dashboard

Secure, user friendly dashboard with visualization through gauges, graphs, sensor signal strength and fuel gauges.

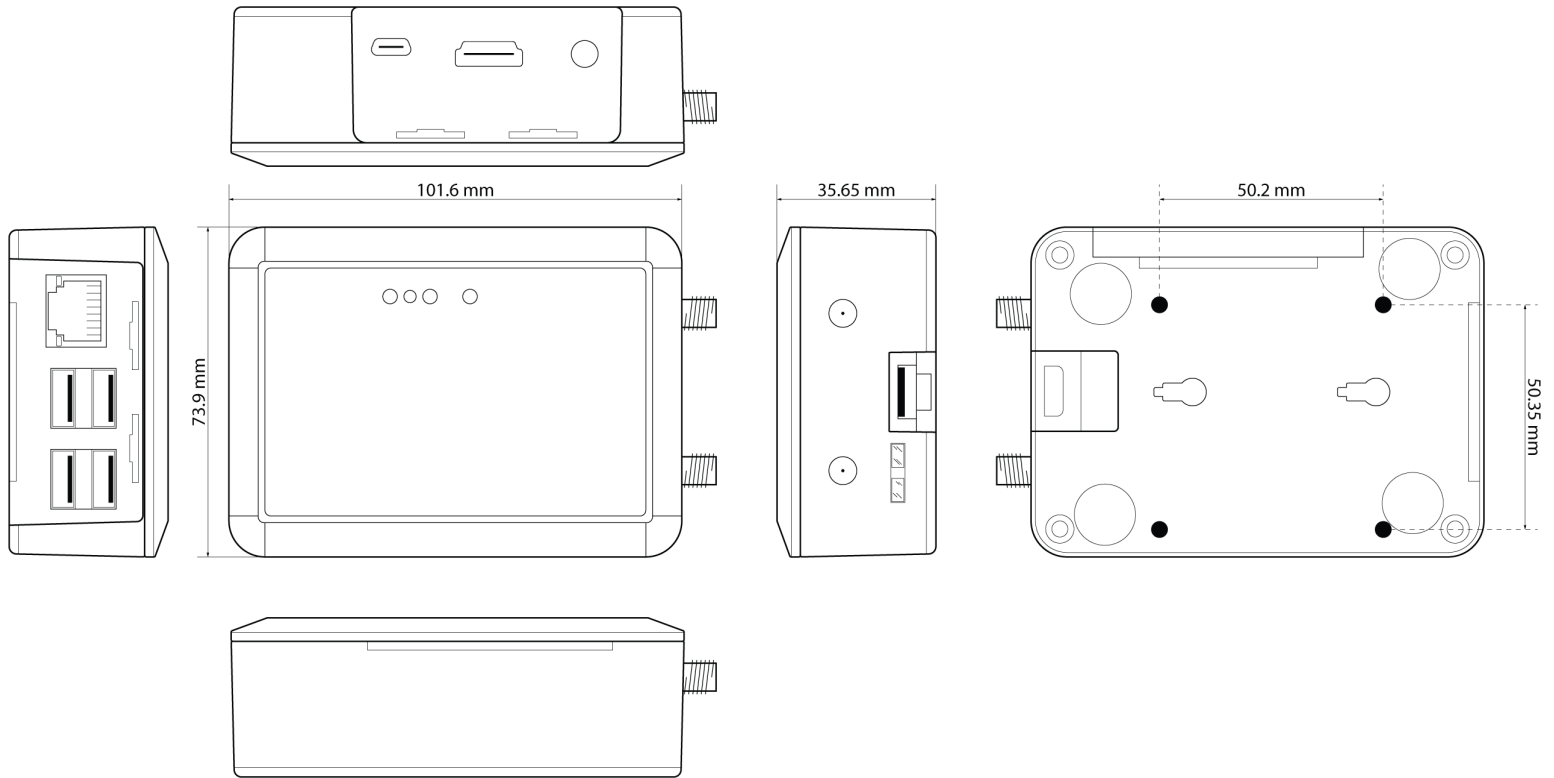

#### Forwarding

The forwarding service allows two-way communications between Whisker.io devices and third party platforms such as Amazon, ThingLogix, etc.

## Mechanical

## Connectivity Options

Every Whisker.io™ Hub can connect to the Internet via Ethernet. Hubs that are purchased with the Cellular option can also connect via Cellular.

## Installation and Setup

All Whisker.io™ hubs are truly plug-and-play, requiring no provisioning or setup in the field. Simply mount the hub, connect it to power, and wait for all the status lights to come on.

Once a hub is installed, it is automatically configured to work with devices within its transmission range.

Whisker.Block®, Internal Temp

## General Description

Whisker.Blocks® are long-range, wireless sensors that come in a variety of I/O and power configurations. These sensor blocks use our proprietary long range wireless communication technology, ensuring reliable and robust operation.

They can be configured for battery or external power. When powered from internal batteries, the sensors can operate for 10 or more years, depending on the sensors use and configuration. Each sensor is housed in a durable, IP67 enclosure that supports a variety of mounting methods. External sensors are connected via one or two 4-pin M8 style waterproof connectors, depending on how many external channels are configured.

The long range, exceptional battery life, and flexible I/O configurations of the Whisker.Block® make it the perfect choice for nearly any IoT application.

## Power

This Whisker.Block® is powered internally using a 3.7V, 5.2A-H LiThCl battery pack that should give 10+ years of service life before a battery change is required, assuming a 5 minute update period.

## Range

They come in a variety of configurations with multiple external channels for various analog and digital inputs. In an unobstructed, outdoor line-of-site environment, the sensor should be able to communicate for more than 0.8 kilometers assuming a receiving antenna elevation of 3.0 meters. If the receiving antenna is raised to 6.1 meters or more, the range should increase to more than 1.6 kilometers.

When used in environments where line of sight cannot be obtained or where there are many reflective obstacles in the transmission path, the range will degrade due to multi-path fading. It is impossible to predict the transmission range of a Whisker.Block® in any specific situation, so we do encourage users to take advantage of our site survey tools to ensure coverage exists anywhere a sensor is to be deployed. For more information on site survey techniques, see application note .

## Internal Channels

This Whisker.Block® is configured with two (2) internal channels:

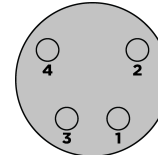

**Battery Voltage**

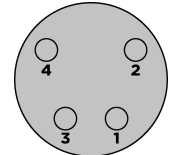

**Ambient Temperature**

## External Connections

This Whisker.Block® has no configured external channels

Con 2: Not used

## Sensor Cable / Door Sensor

### General Description

This cable kit contains a base Sensor Attachment Cable that is connected to the sensor block. The below listed components are shipped attach to the listed Sensor Attachment Cable as shown in the below diagram.

This bundle contains the following components:

Quantity	Part Number	Description	
1	WBP-DO-01-3F	Door Sensor	
1	CBL_M8MALE26AWG_3FT_01	Sensor Attachment Cable, 91cm Cable Blue/No Marker = Channel 1, Yellow Marker = Channel 2	

### Wiring Diagram

# WBP-DO-01-3F

Door Sensor, 91cm Cable

## General Description

Whisker.Blocks™ are long-range, wireless sensors that come in a variety of I/O and power configurations. These sensor blocks use our proprietary long range wireless communication technology, ensuring reliable and robust operation. This door sensor can be connected to sensor blocks with a dry contact input. The sensor is a normally open switch that closes in the presence of a magnetic field.

There are multiple compatible Whisker.Block™ products available that have a dry contact input. The part numbers of the compatible Whisker.Block™ products are show to the right.

Refer to the Whisker.Block™ documentation for details on the various modes for reading the state of the sensor.

## Power

This is a passive sensor that requires no external power.

## Mounting

There are screw holes for mounting both the switch body and the associated magnet but they can also be mounted with double sided tape (not included). In a typical application the switch body is mounted to the door or window frame and the magnet is mounted on the door or window so that the magnet is closely aligned with the switch body when the door or window is closed.

Sensor Attachment Cable, 91cm Cable

## General Description

Whisker.Blocks® are long-range, wireless sensors that come in a variety of I/O and power configurations. These sensor blocks use our proprietary long range wireless communication technology, ensuring reliable and robust operation. They come in a variety of configurations with multiple external channels for various analog and digital inputs.

The Sensor Attachment Cable is installed on the Whisker.Block® to provide a means to connect up to two (2) sensors to the Whisker.Block® without having to wire the sensor(s) directly to the Whisker.Block® circuit board connector.

## Mounting

The Sensor Attachment Cable comes attached to the Whisker.Block®. In some cases, the sensors must be connected to the Sensor Attachment Cable using the wiring configuration shown on the sensor data sheet.
