

## SP-37-A

Ruland SP-37-A, 2 5/16" Two-Piece Shaft Collar, Aluminum, Clamp Style, 3 3/8" OD, 0.750" Width

## Description

Ruland SP-37-A is a two-piece shaft collar with a 2.3125" bore, 3 3/8" OD, and 0.750" width. The clamp style design does not mar the shaft, is easy to remove, and is indefinitely adjustable. It is commonly used for guiding, spacing, stopping, mounting, and component alignment. Equipment manufacturers benefit from the tightly controlled face to bore perpendicularity (TIR of ? .002"). Perpendicularity is critical for alignment when the shaft collar is used as a load bearing face, mechanical stop, or for mounting components such as gears or bearings. Proprietary processes have been developed by Ruland to maintain superior fit, finish, and holding power. SP-37-A is stamped with the Ruland name and bore size for ease of identification. Halves are mated throughout the manufactured from solid bar stock sourced from select North American mills and machined to a fine burr free finish. Ruland uses high grade 2024 aluminum for increased screw seating torque. SP-37-A is RoHS3 and REACH compliant and manufactured in our Marlborough, MA factory under strict controls using proprietary processes.

Installation Instructions

- 1. Use the SP-37-A two-piece shaft collar as it is received.
- 2. Wipe the bore clean.

www.P65Warnings.ca.gov.

- 3. Apply a thin coat of light oil to the shaft.
- 4. Place the collar onto the desired shaft location with the groove side as the work surface. Tighten the collar using a 1/4 in hex wrench until a slight resistance is felt.
- 5. Be sure to maintain the gap of 0.125 in between the two halves of the collar during installation.
- 6. Wring collar into its final position and tighten the screw to the full recommended seating torque of 325 lb-in using a 1/4 in torque wrench.
