Machinechat Software License Card - JEDI Pro

COM-20715

Machinechat® JEDI is a turnkey software application that allows you to easily add data collection, visualization, monitoring and managed storage to commercial IoT deployments. Because JEDI Pro runs as a local service on server or single board computer, there is no need for sending all your data to the cloud and there are no monthly subscription fees.

JEDI Pro is designed to become an integral part of your IoT solution. With a footprint of less than 35 megabytes and features that rival popular IoT cloud platforms, JEDI Pro runs entirely on your ARM-based embedded hardware or X86-based computers. You are in control of your data, solution, and costs.

Note: This is currently available as a physical license card that will be shipped to you with a unique license code. We cannot accept returns/exchanges of this product.
