868.95 MHz SAW Resonator

• Designed for European 868.95 MHz Transmitters

· Very Low Series Resistance

Quartz Stability

• Complies with Directive 2002/95/EC (RoHS)

• Tape and Reel Standard per ANSI/EIA-481

The RO3156E-3 is a true one-port, surface-acoustic-wave (SAW) resonator in a surface-mount ceramic case. It provides reliable, fundamental-mode, quartz frequency stabilization of fixed-frequency transmitters operating at 868.95 MHz.This SAW is designed specifically for remote-control and wireless security transmitters operating under ETSI EN 300 220.

- 1. The design, manufacturing process, and specifications of this device are subject to change.
- 2. US or International patents may apply.
- 3. RoHS compliant from the first date of manufacture.

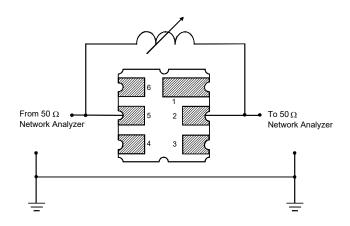

Electrical Connections

The SAW resonator is bidirectional and may be installed with either orientation. The two terminals are interchangeable and unnumbered. The callout NC indicates no internal connection. The NC pads assist with mechanical positioning and stability. External grounding of the NC pads is recommended to help reduce parasitic capacitance in the circuit.
