Product Change Notification: PCN-22-137689

PCN Date: 30-MAY-22

TE would like to inform you of the following change(s) to the listed TE Connectivity Product. In case of any further questions about this change(s), please contact your TE Connectivity Sales Engineer. Affected part, drawing and/or specification numbers are listed on the attached sheet(s).

General Product Description:
Straight .110 series FASTON

Description of Changes
Lower the side wall on the transition area between the crimp and mating rolls. From .051"[1.29mm] to .040"[1.02mm]. The PNs 160303-X and 160316-X were already changed, but there was a drafting unit conversion error on the customer drawings to be corrected.

Reason for Changes:
Original change was to lower unusually high transition side wall that was occasionally prone to cracking during crimp. This ECR is correcting drafting errors on the mm to inch conversion.

PCN Attributes:	
Product Category: Terminals	Kind of Change: Geometry
Change Feature: Special Design Feature	Potential Customer Impact: No Customer Impact
Remarks: This processes the same way. This "tweak" just eliminates the occasional issue with a transition area crack during crimping. This change had been implemented. We are confirming that all the dies were properly updated. This ECR is correcting a drafting error of the mm to inch conversion on two customer drawings
