

## PSR10-2-2-SS

Ruland PSR10-2-2-SS, 1/8" x 1/8" Four Beam Coupling, Stainless Steel, Set Screw Style, 0.625" OD, 0.800" Length

## Description

Ruland PSR10-2-2-SS is a set screw style four beam coupling with 0.1250" x 0.1250" bores, 0.625" OD, and 0.800" length. It is machined from a single piece of material and feature two sets of two spiral cuts. This gives it higher torque capacity, lower windup, and larger body sizes than single beam couplings. PSR10-2-2-SS is zero-backlash and has a balanced design for reduced vibration at high speeds of up to 6,000 RPM. This four beam spiral coupling is zero-backlash and has a balanced design for reduced vibration at high speeds of up to 6,000 RPM. All hardware is metric and tests beyond DIN 912 12.9 standards for maximum torque capabilities. PSR10-2-2-SS is made from 303 stainless steel for increased torque capacity. It is machined from bar stock that is sourced exclusively from North American mills and RoHS3 and REACH compliant. PSR10-2-2-SS is manufactured in our Marlborough, MA factory under strict controls using proprietary processes.

determine if the misalignment parameters are within the limits of the coupling. (Angular

Misialignment: 3°, Parallel Misalignment: 0.008 in, Axial Motion: 0.005 in)

- 2. Fully tighten the M3 screws on one hub to the recommended seating torque of 0.92 Nm using a 1.5 mm hex torque wrench.
- 3. Before tightening the screws on the second hub, rotate the coupling by hand to allow it to reach its free length.
- Tighten the screws on the second hub to the recommended seating torque. Make sure the coupling remains axially relaxed and the misalignment angle remains centered along the length of the coupling.
- 5. The shafts may extend into the relieved portion of the bore as long as it does not exceed the shaft penetration length of 0.377 in.
