

NCS2220AGEVB: Low Power Dual Comparator Evaluation Board

The NCS2220A evaluation board provides a 50 Ω controlled impedance environment, and is designed to facilitate a quick evaluation of the NCS2220A 8 pin UDFN device. The inputs have place holders for termination resistors to ground if input signal requires termination. The outputs have a place holder for loads. It can either be loaded with resistor, capacitor, both resistor and capacitor, or none at all. The evaluation board can be operated with either single or dual power supply.

Evaluation/Development Tool Information

Product	Status	Compliance	Short Description	Parts Used
NCS2220AGEVB	Active	Pb-free	Low Power Dual Comparator Evaluation Board	NCS2220AMUT1G
