

TRACTION MATS

Never Get Stuck Again in Snow, Ice, Sand or Mud!

⚠ WARNING!

- Never stand behind or in front of the vehicle when using traction mats. Never hold or stand on mats while vehicle is in motion.
- Never install traction mats while vehicle is running.
- Never accelerate quickly when using traction mats since the mats can forcefully eject from under the tire and cause injury.

Instructions:

1. Make sure vehicle is in "PARK" and apply emergency brake. Turn off vehicle.
2. Unfold each traction mat and place each mat under each drive wheel of vehicle. If vehicle is front wheel drive, place the two mats under the front tires. If vehicle is rear wheel drive, place the two mats under the rear tires. The smooth rounded edge marked "PLACE THIS SIDE UP" should be wedged as far as possible under the tire.
3. Start vehicle and drive slowly over the traction mats and onto firm ground.*
4. Park vehicle and apply emergency brake.
5. Retrieve traction mats and return them to storage.

* If tires continue to spin on traction mats, place vehicle in "PARK", apply emergency brake, and turn off vehicle. Clean off mats and reinstall under tires. Do not continue to apply gas if tires spin on traction mats.
