PRODUCT CHANGE NOTICE

PCN 2012-02
March 1, 2012

Product(s) affected: **HVC (High Voltage Thick Film Chip Resistor) Series.**

Changes: The electrical specifications of this series have been upgraded. Higher power ratings that previously were optional are now standard. Tighter tolerances of 0.5% and 0.25% are now offered. Value ranges were extended for all tolerance options of the 1206 and 2010 package sizes. The Temperature Coefficient of Resistance (TCR) option of $\pm 300\text{PPM}/^\circ\text{C}$ has been deleted as the same resistance value ranges are available in tighter TCR options.

Explanation: Most of these upgraded specifications were available previously as options. We now offer them as standard.

Effective Date: Effective immediately.
