

Product/Process Change Notification 2018-12-3

Dear Customer,

At Navitas, we are focused on delivering innovative products to our customers that are fast, simple and reliable. As we continuously improve our products, we will communicate changes to our customers per JESD-46 Solid State Device Change Notification Standard.

Products Affected:

NV6115, NV6117

Details of the Change:

The NV6115 and NV6117 Moisture Sensitivity Level (MSL) have been upgraded from MSL3 to MSL1.

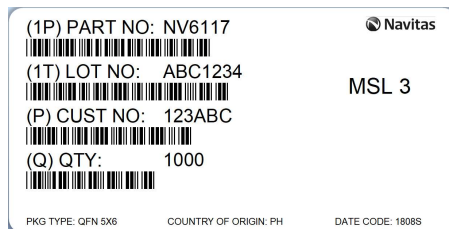

NV6115 and NV6117 have met MSL1 criteria since production release, however, the MSL3 rating was used until additional production lot validation testing could be completed.

Based on gathering package reliability data from production lots over the first 6 months of production the parts will now be processed and labelled as MSL1.

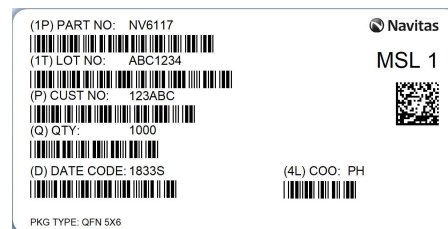

There are no changes to component materials or processing methods as part of this change.

The packaging labels have changed to reflect MSL1 status as below:

FROM

TO

Timing of the Change:

First date code with this change is from 1841.
