WL50-2 & WL50F-2 LED Work Lights Discontinuation

Banner Engineering is issuing notification regarding the discontinuation of all WL50-2 and WL50F-2 LED Work Lights. Banner has recently launched the 3rd generation platform of these products, the WL50-3 and WL50F-3 series and these products are serving a variety of desk, workstation, enclosure, and small lighting area applications very successfully.

Customers should begin migrating to the WL50(F)-3 platforms as Banner will no longer accept new orders for the legacy WL50(F)-2 models after April 29, 2022. The WL50(F)-3 models are mechanically identical to the WL50(F)-2, so they are a drop-in replacement with the same housing and electrical connection. They all require the same amount of power but produce double the output so are brighter.

Please ensure all your sales teams are aware of this product notice and please work with your Banner regional sales team regarding all your Lighting and other industrial automation sensing needs.

Thank you!
