

Quick Start Guide

Bluetooth Low Energy expansion board based on BlueNRG-M2SP module for STM32 Nucleo (X-NUCLEO-BNRG2A1)

Version 2.0 (July 2, 2020)

Agenda

STM32 Open Development Environment: Overview

1- Hardware and Software overview

Bluetooth Low Energy expansion board

X-NUCLEO-BNRG2A1 Hardware Description

- The X-NUCLEO-BNRG2A1 is a Bluetooth Low Energy (BLE) evaluation and development board system, designed around ST's BLUENRG-M2SP Bluetooth Low Energy module based on BlueNRG-2.
- The BlueNRG-2 processor hosted in the BLUENRG-M2SP module communicates with the STM32 microcontroller, hosted on the Nucleo development board, through an SPI link available on the Arduino UNO R3 connector.

Key Products on board

BLUENRG-M2SP

Bluetooth Low Energy, FCC and IC certified (FCC ID: S9NBNRGM2SP, IC: B976C-BNRGM2SP), module based on Bluetooth® Low Energy wireless network processor BlueNRG-2, BLE v5.0 compliant.

BLUENRG-M2SP integrates a BALF-NRG-02D3 balun and a PCB antenna. It embeds 32 MHz crystal oscillator for the BlueNRG-2.

M95640-RMC6TG 64-Kbit serial SPI EEPROM with high-speed clock interface

Hardware Overview

X-NUCLEO-BNRG2A1

X-CUBE-BLE2

Software Overview

X-CUBE-BLE2

X-CUBE-BLE2 Software Description

- The X-CUBE-BLE2 is a software package which provides STM32 drivers running for the BlueNRG-2 Bluetooth Low Energy device. It is an STM32Cube expansion software package that eases portability across different STM32 MCU families
- Implementation examples are available for the STM32 Nucleo Bluetooth Low Energy expansion board (X-NUCLEO-BNRG2A1) plugged on top of an STM32 Nucleo board (NUCLEO-L476RG)

Key features

- Complete middleware to build applications using the BlueNRG-2 network processor
- Easy portability across different MCU families thanks to the STM32Cube
- Sample applications that the developer can use to start experimenting with the code
- References to free Android and iOS app that can be used along with the sample applications
- Free, user-friendly license terms

Application	Applications
Middleware	BLE
Hardware Abstraction	STM32Cube Hardware Abstraction Layer (HAL)
Hardware	STM32 Nucleo expansion boards X-NUCLEO-BNRG2A1 (Connect)
- 1	STM32 Nucleo development board

2- Setup & Demo Examples

Setup & Application Examples HW prerequisites for X-NUCLEO-BNRG2A1

- 1x X-NUCLEO-BNRG2A1 Bluetooth Low Energy expansion board
- 1x STM32 Nucleo development board (Nucleo-L476RG)
- 1 x BLE-enabled smartphone and associated apps

Nucleo-L476RG + X-NUCLEO-BNRG2A1

Smartphone requ	irements	App for Demo	App for Hands On	
Android OS device	The formation of the fo	ST BLE Sensor	BLE Scanner	
iOS device	at the second	https://play.google.com/store/apps /details?id=com.st.bluems	<u>https://play.google.com/store/apps/</u> details?id=com.macdom.ble.blesca nner	Google play
	UNDER LA COLOR	https://apps.apple.com/it/app/st- bluems/id993670214	https://apps.apple.com/us/app/ble- scanner-4-0/id1221763603	Available on the App Store

Setup & Application Examples HW limitation

 Warning Even if not strictly required for the correct working of the BlueNRG-2 module, to correctly set the BlueNRG-2 RESET pin on pin D7 of the Arduino connector a 0 Ohm resistor must be soldiered on R117. Alternatively, the D7 pin and the pin #5 of the J12 on the X-NUCLEO-BNRG2A1 expansion board must be bridged (as shown in the picture).

Setup & Application Examples

Software and Other prerequisites

- STSW-LINK009
 - <u>ST-LINK/V2-1 USB driver</u>
- STSW-LINK007
 - ST-LINK/V2-1 firmware upgrade

• X-CUBE-BLE2

- Copy the zip file content into the "c:\Program Files (x86)\STMicroelectronics\" folder on your PC
- The package contains the source code examples (Keil, IAR EWARM, STM32CubeIDE) based on NUCLEO-L476RG

BlueNRG GUI SW package

• The BlueNRG GUI SW package contains the Graphical User interface (GUI) and script launcher PC applications which supports BlueNRG-2, BlueNRG-1, BlueNRG-MS and BlueNRG Bluetooth Low Energy (BLE) devices.

Start coding in just a few minutes

X-CUBE-BLE2 sample applications

Evaluate in just a few minutes (1/2)

Download and install the ST BLE Sensor application on your smartphone from Google Play or App Store

X-CUBE-BLE2 sample applications

Evaluate in just a few minutes (2/2)

- 3 Connect your smartphone application to the BlueNRG-2 device and control the cube on the smartphone
- Simulated environmental and motion data are sent periodically from the STM32 Nucleo board to the smartphone app

X-CUBE-BLE2 sample applications

Evaluate using the BlueNRG GUI

2 Download the BlueNRG GUI from st.com and install it on your PC

life.augmented

X-CUBE-BLE2 for BlueNRG-2N device

Emulating BlueNRG-2N device with X-NUCLEO-BNRG2A1 (1/3)

1 The X-CUBE-BLE2 software package can be used also with the BlueNRG-2N device

- 2 The BlueNRG-2 device on the X-NUCLEO-BNRG2A1 expansion board can be used to emulate the BlueNRG-2N device
- 3 To flash the BlueNRG-2N firmware on the BlueNRG-2 device, you need a standard <u>ST-LINK/V2</u> debugger with 5 jumper wires (female-female)
- 4 Connect the J12 pins on the X-NUCLEO-BNRG2A1 and the ST-Link/V2 pins as shown in the table below

	J12 pin no.	ST-Link/V2 pin no.
VDD	1	1
SWTCK	2	9
GND	3	12
SWDIO	4	7
RST	5	15

X-CUBE-BLE2 for BlueNRG-2N device

Emulating BlueNRG-2N device with X-NUCLEO-BNRG2A1 (2/3)

- 5 Download and unpack the <u>STSW-BNRG2N-V320</u>, containing the BlueNRG-2N firmware image (available on <u>www.st.com</u>)
- 6 Download and install the <u>STSW-BNRGFLASHER</u> (available only for Windows)
- **7** Connect the ST-Link/V2 debugger to your PC

X-CUBE-BLE2 for BlueNRG-2N device

Emulating BlueNRG-2N device with X-NUCLEO-BNRG2A1 (3/3)

8 Open the BlueNRG-1_2 Flasher Utility (STSW-BNRGFLASHER)

a Select the SWD tab

Restoring the BlueNRG-2 firmware image

- To restore the BlueNRG-2 firmware image on the BlueNRG-2 device, download and install the <u>STSW-BNRGUI</u>
- Execute all steps described in previous slide at point 8, loading (8.c) the DTM_SPI.hex firmware contained in the STSW-BNRGUI installation folder (usually C:\Program Files (x86)\STMicroelectronics\BlueNRG GUI 3.2.1\Firmware\BlueNRG2\DTM for version 3.2.1)

4- STM32 Open Development Environment: Overview

STM32 Open Development Environment Fast, affordable Prototyping and Development

 The STM32 Open Development Environment (STM32 ODE) is an open, flexible, easy, and affordable way to develop innovative devices and applications based on the STM32 32-bit microcontroller family combined with other state-of-the-art ST components connected via expansion boards. It enables fast prototyping with leading-edge components that can quickly be transformed into final designs
