The [OTA7001A](#) display driver has reached EOL. These displays will now use [ILI6126C](#) driver for future production. The new driver has proven to be backwards compatible with existing systems based on internal testing.

As with any compatible controllers made by different manufacturers, there always exists the possibility of slight variations in timings and tolerances. We understand that every customer's application is unique, and therefore we recommend our customers using this display to request new samples for verification.
