# SINGLE/MULTI OUTPUT AC-DC

# **FEATURES:**

- Universal 85-264V Input
- Single, Dual or Triple Outputs
- 0-70°C Operating Temperature
- Compact 2.25" x 4.00" x .96" Size
   IEC 60601-1 3<sup>rd</sup> ed. Medical Cert.
   2 Year Warranty
   IEC 62368-1 2<sup>nd</sup> ed. Certification
  - Class B Emissions per EN55011/32
  - IEC 60601-1-2 4th ed. EMC
  - RoHS Compliant
  - Optional Chassis/Cover

CHASSIS/COVER

All specifications are maximum at 25°C/25W unless otherwise stated, may vary by model and are subject to change without notice.

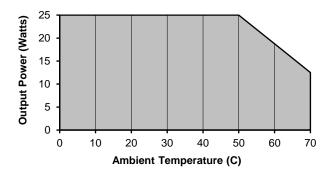

### SRP-25 SERIES MECHANICAL SPECIFICATIONS

## APPLICATIONS INFORMATION

- 1. Each output can deliver its rated current but Total Output Power must not exceed 25W.
- Generally, adequate cooling is provided when semiconductor case temperatures do not exceed 70°C rise and transformer temperature does not exceed 60°C rise at any specified ambient temperature.
- Sufficient area must be provided around power supply to allow natural movement of air to develop in convection-cooled applications.
- This product is intended for use as a professionally-installed component within information technology, industrial, and medical equipment and is not intended for stand-alone operation.
- A minimum load of 10% is required on Output 1 to ensure proper regulation of remaining outputs.
- This product includes only one fuse in the input circuit. In consideration of Clause 8.11.5 of IEC 60601-1:2005, a second fuse may be required in neutral conductor of the end product.
- Peak-to-Peak Output Ripple and Noise is measured directly at the output terminals of the power supply, without the use of the probe ground lead or retractable tip (tip-and-barrel method), 20 MHz bandwidth.
- This product was type-tested and safety-certified using the dielectric strength test voltages listed in Table 6 of IEC 60601-1:2005. In consideration of Clause 8.8.3, care must be taken to insure the voltage applied to a reinforced insulation does not overstress different types and levels of insulation. Primary and secondary-to-ground capacitors may need to be disconnected prior to performing a dielectric strength test on the power supply or the end product. It is highly recommended that the DC test voltages listed in DVB.1, Annex DVB of UL 60601-1 1st Edition are not exceeded during a production-line dielectric strength test of the assembled end product. Please consult factory for further information.
- This power supply has been safety-approved and final-tested using a DC dielectric strength test. Please consult factory before performing an AC dielectric strength test.
- Maximum screw penetration into bottom chassis mounting holes is 0.100 inches.
   Maximum screw penetration into side chassis mounting holes is 0.250 inches.
- To comply with emissions specifications, all four mounting hole pads must be electrically connected to a common metal chassis. Chassis/Cover option is recommended. Refer to Operating Instructions for additional information.
- Common RF shielding precautions may need to be taken to assure emissions compliance. Refer to Operating Instructions for additional information.

## **MAXIMUM OUTPUT POWER vs. AMBIENT TEMPERATURE**

CONNECTOR SPECIFICATIONS				
P1	AC Input	0.156 friction lock header mates with Molex 09-50-3031 or equivalent crimp terminal housing with Molex 08-50-0189 or equivalent crimp terminal.		
P2	DC Output	0.156 friction lock header mates with Molex 09-50-3061 or equivalent crimp terminal housing with Molex 08-50-0189 or equivalent crimp terminal.		
G	Ground	0.187 quick disconnect terminal.
