# Phyton™

CPI2-B1-SL51 – universal programmer

CPI2-B1-SL51 in-system device programmer

This preloaded device programmer bundles a standard CPI2-B1 single-channel device programmer with a device library license that enables programming of a variety of Silicon Labs EFM8 and 8051 devices currently supported by Phyton. See a list of the preinstalled device library licenses in the matrix below. Plus, as any other preloaded device programmers, this bundle includes the free Basic Device Library license.

The CPI2-B1-SL51 device programmer will automatically enable programming of all new devices belonging to the Silicon Labs EFM8 and 8051 devices libraries below that Phyton will support in the future – no new purchase is required.

To expand the CPI2-B1-SL51 device list, additional CPI2-D-xxxx device library licenses, not included in the CPI2-B1-SL51 bundle, can be purchased and installed by the programmer's user.

Bundled licenses	Description
Basic License	Free Basic Device Library license that supports all serial flash memory devices and selected 8- and 16-bit microcontrollers from different manufacturers
CPI2-D-SL51	Silicon Labs EFM8/8051 device library license
