

7250 Staticide[®] ESD Microfiber Foam Swab

Product# 7250

ESD-Safe for Critical Cleaning

ACL's ESD Microfiber Foam Swab is an exceptional quality swab for the critical cleaning of ESD static-sensitive surfaces. Constructed of medical-grade foam wrapped in microfiber knit, this swab is highly effective in removing and holding liquid or dry contaminants in volume. The rigid ESD handle has a dissipative resistance and will not generate a charge.

The inner foam pad adds increased liquid holding capacity and cushion while microfiber enhances pick-up and can withstand abrasion. These characteristics make it ideal to use with solvents such as acetone, ethanol, IPA, and methanol and for applying or removing lubricants in hard-to-reach areas.

Ideal for the following applications:

- Medical device manufacturing and assembly
- Electronics manufacturing and assembly
- Nanotechnology
- Automotive
- Aerospace
- Optical lenses and components

FEATURES:

- ❖ **Class 10 cleanroom laundered**
- ❖ **ISO Class 4-7 compatible**
- ❖ **High solvent capacity**
- ❖ **Ultra-low particle**
- ❖ **Abrasion resistant**
- ❖ **ESD rigid handle; measures $10^8 - 10^{10}$ ohms/sq.**
- ❖ **Small, round tip**

Product# 7250: 3" swab with round tip
Tip: 0.291" x 0.157"
Handle: Rigid 2.36" x 2.75"

500 swabs per bag / 2 bags per case
