PXD10-xxWSxx Single Output DC/DC Converter

9 to 36 Vdc and 18 to 75 Vdc input, 3.3 to 15 Vdc Single Output, 10W

TDK·Lambda

Features

- Single output current up to 2.5A
- 10 watts maximum output power
- 4:1 ultra wide input voltage range of 9-36 and 18-75VDC
- Six-sided continuous shield
- High efficiency up to 84%
- Low profile: 2.00×1.00×0.40 inch (50.8×25.4×10.2 mm)
- Fixed switching frequency
- RoHS compliant
- No minimum load
- Input to output isolation: 1600Vdc,min
- Operating case temperature range: 100°C max
- Output over-voltage protection
- Over-current protection, auto-recovery
- Output short circuit protection

Options

- Heat sinks available for extended operation
- Remote on/off and logic configurations

Applications

- Distributed power architectures
- Computer equipment
- Communications equipment

General Description

The PXD10-xxWSxx single output series offers 10 watts of output power from a 2 X 1 X 0.4 inch package. It has 4:1 ultra wide input voltage of 9-36VDC, 18-75VDC,features 1600VDC of isolation, short circuit, over voltage protection, and six sided shielding. All models are particularly suited to telecommunications, industrial, mobile telecom and test equipment applications.

Table of Contents

Absolute Maximum Rating				
Parameter	**Model**	**Min**	**Max**	**Unit**
Input Voltage				
Continuous	24WSxx		36	V_{DC}
	48WSxx		75	
Transient (100ms)	24WSxx		50	
	48WSxx		100	
Operating Ambient Temperature (with derating)	All	-40	85	°C
Operating Case Temperature			100	°C
Storage Temperature	All	-55	105	°C

Output Specification					
Parameter	**Model**	**Min**	**Typ**	**Max**	**Unit**
Output Voltage Range	xxWS3P3	3.267	3.3	3.333	V_{DC}
(Vin = Vin(nom); Full Load ; T_A=25 °C)	xxWS05	4.95	5	5.05	
	xxWS12	11.88	12	12.12	
	xxWS15	14.85	15	15.15	
Output Regulation					
Line (Vin(min) to Vin(max) at Full Load)	All			±0.2	%
Load (0% to 100% of Full Load)				±0.5	
Output Ripple & Noise	All			50	mV_{P-P}
Peak -to- Peak (20MHz bandwidth)					
Temperature Coefficient	All			±0.02	%/°C
Output Voltage Overshoot	All		0	5	% V_{OUT}
(Vin(min) to Vin(max); Full Load ; T_A=25°C)					
Dynamic Load Response					
(Vin = Vin(nom); T_A=25°C)					
Load step change from					
75% to 100% or 100 to 75% of Full Load					
Peak Deviation	All		200		mV
Setting Time (V_{OUT} 10% peak deviation)	All		250		µS
Output Current	xxWS3P3	0		2500	mA
	xxWS05	0		2000	
	xxWS12	0		830	
	xxWS15	0		670	
Output Over Voltage Protection	xxWS3P3		3.9		V_{DC}
(Zener diode clamp)	xxWS05		6.2		
	xxWS12		15		
	xxWS15		18		
Output Over Current Protection	All		130	150	% FL.
Output Short Circuit Protection	All	Hiccup, automatic recovery			

Input Specification

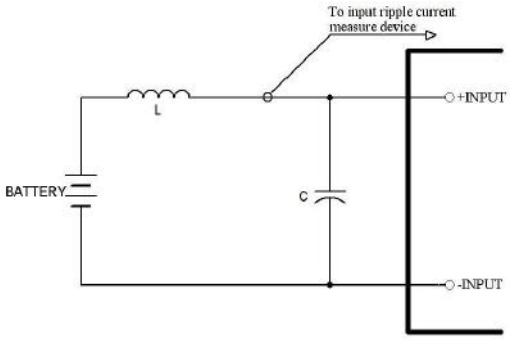
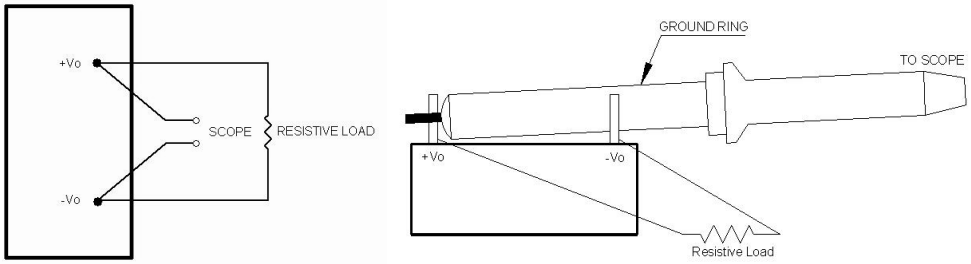
Testing Configurations

Input reflected-ripple current measurement test:

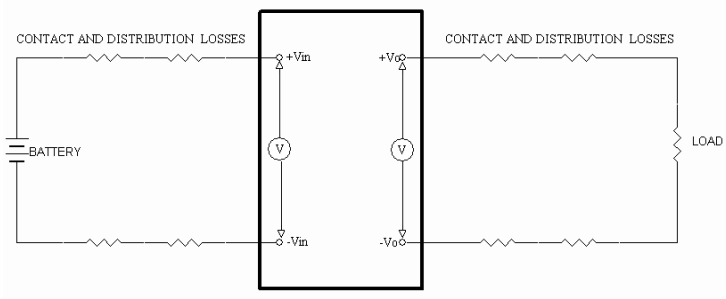


Component	Value	Voltage	Reference
L	12μH	----	----
C	100μF	100V	Aluminum Electrolytic Capacitor

Peak-to-peak output ripple & noise measurement test



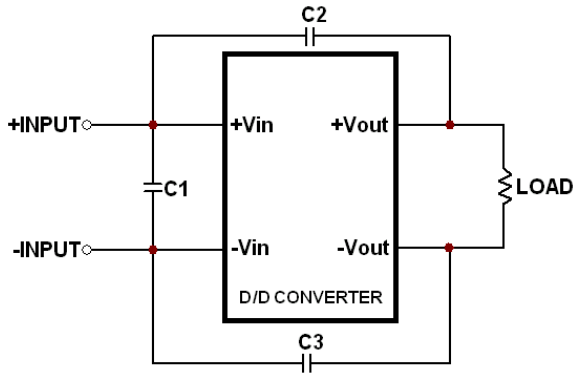
Output voltage and efficiency measurement test



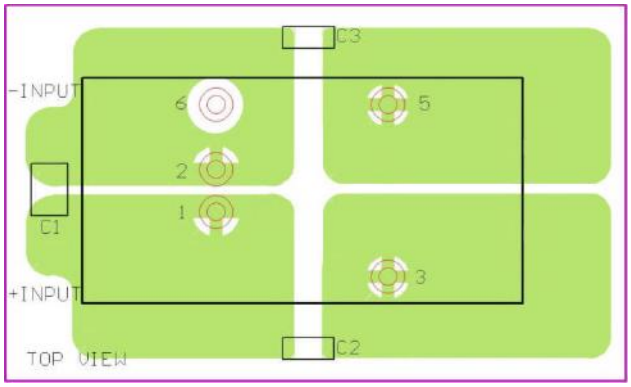
Note: All measurements are taken at the module terminals.

$$Efficiency = \left(\frac{V_o \times I_o}{V_{in} \times I_{in}} \right) \times 100\%$$

EMC considerations



Suggested schematic for EN55022 conducted emission Class A limits



Recommended layout with input filter

To meet conducted emissions EN55022 CLASS A the following components are needed:

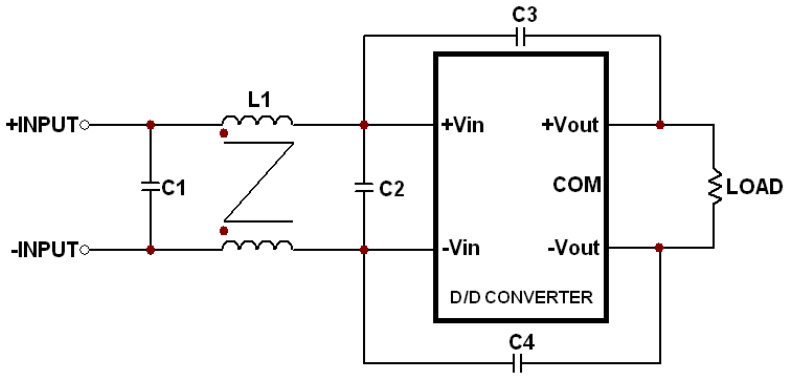
PXD10-24WSxx

Component	Value	Voltage	Reference
C1	1μF	50V	1210 MLCC
C2, C3	1000pF	2KV	1808 MLCC

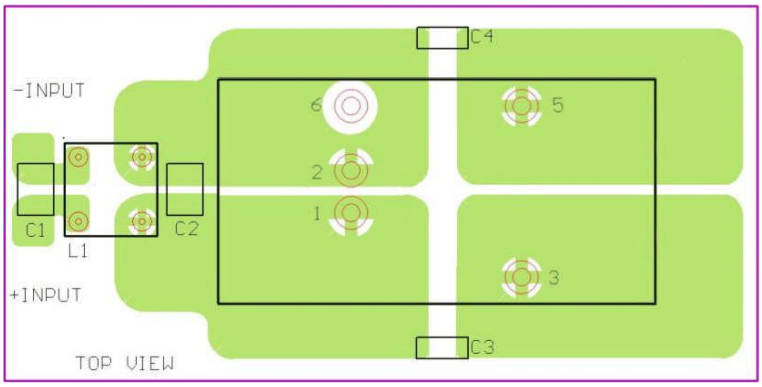
PXD10-48WSxx

Component	Value	Voltage	Reference
C1	1.5μF	100V	1812 MLCC
C2, C3	1000pF	2KV	1808 MLCC

EMC considerations (Continued)



Suggested schematic for EN55022 conducted emission Class B limits



Recommended layout with input filter

To meet conducted emissions EN55022 CLASS B the following components are needed:

PXD10-24WSxx

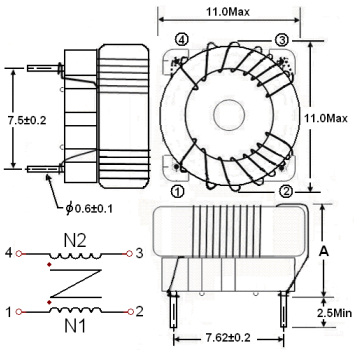
Component	Value	Voltage	Reference
C1	2.2μF	50V	1812 MLCC
C3, C4	1000pF	2KV	1808 MLCC
L1	325μH	----	Common Choke

PXD10-48WSxx

Component	Value	Voltage	Reference
C1, C2	2.2μF	100V	1812 MLCC
C3, C4	1000pF	2KV	1808 MLCC
L1	325μH	----	Common Choke

Common Choke L1 is defined as follows:

- L-325μH±35% / DCR-35mΩ, max
  A height: 8.8 mm, Max
- Test condition-100kHz / 100mV
- Recommended through hole-Φ0.8mm
- All dimensions in millimeters



Input Source Impedance

The converter should be connected to a low impedance input source. Highly inductive source impedance can affect the stability of the converter Input external L-C filter is recommended to minimize input reflected ripple current. The inductor is a simulated source impedance of 12μH and the capacitor is Nippon chemi-con KY series 100μF/100V. The capacitor must be located as close as possible to the input terminals of the converter for lowest impedance.

Output Over Current Protection

When excessive output currents occur in the system, circuit protection is required on all converters. Normally, overload current is maintained at approximately 150 percent of rated current for PXF40-xxSxx series.

Hiccup-mode is a method of operation in a converter whose purpose is to protect the power supply from being damaged during an over-current fault condition. It also enables the converter to restart when the fault is removed. There are other ways of protecting the converter when it is over-loaded, such as the maximum current limiting or current foldback methods.

One of the problems resulting from over current is that excessive heat may be generated in power devices; especially MOSFET and Schottky diodes and the temperature of these devices may exceed their specified limits. A protection mechanism has to be used to prevent these power devices from being damaged.

The operation of hiccup is as follows. When the current sense circuit sees an over-current event, the controller shuts off the converter for a given time and then tries to start up the converter again. If the over-load condition has been removed, the converter will start up and operate normally; otherwise, the controller will see another over-current event and will shut off the converter again, repeating the previous cycle. Hiccup operation has none of the drawbacks of the other two protection methods, although its circuit is more complicated because it requires a timing circuit. The excess heat due to overload lasts for only a short duration in the hiccup cycle, hence the junction temperature of the power devices is much lower.

Output Over Voltage Protection

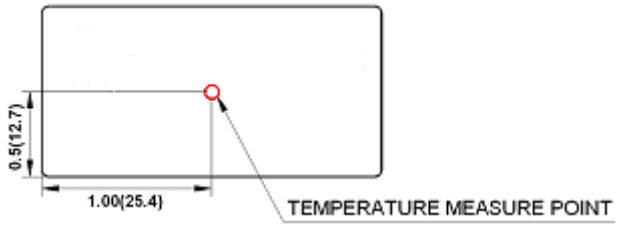
The output over-voltage protection consists of an output Zener diode that monitors the voltage on the output terminals. If the voltage on the output terminals exceeds the over-voltage protection threshold, then the Zener diode clamps the output voltage.

Short Circuit Protection

Continuous, hiccup and auto-recovery mode.

Thermal Consideration

The converter operates in a variety of thermal environments; however, sufficient cooling should be provided to help ensure reliable operation of the unit. Heat is removed by conduction, convection, and radiation to the surrounding environment. Proper cooling can be verified by measuring the point as shown in the figure below. The temperature at this location should not exceed 100°C. When Operating, adequate cooling must be provided to maintain the test point temperature at or below 100°C. Although the maximum point temperature of the power modules is 100°C, lowering this temperature yields higher reliability.



Measurement shown in inches(mm) TOP VIEW

Remote ON/OFF Control (Option)

Remote control is an optional feature.

Positive logic:

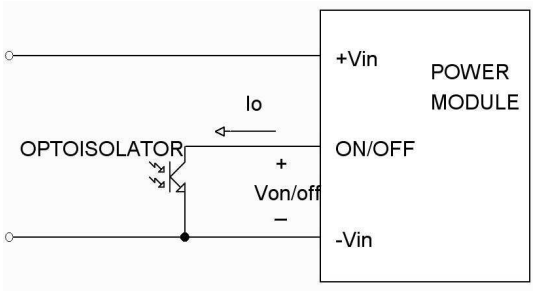
Turns the module On during logic High on the On/Off pin and turns Off during logic Low.

Negative logic:

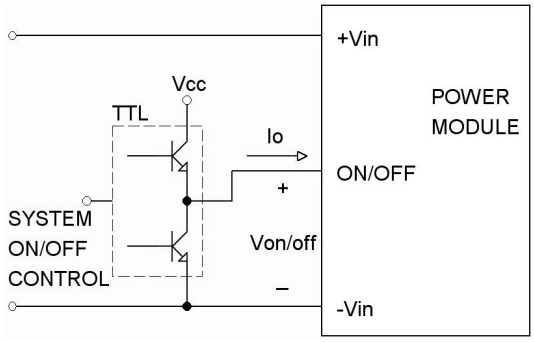
Turns the module On during logic Low on the On/Off pin and turns Off during logic High.

The On/Off pin is an open collector/drain logic input signal (Von/off) that referenced to $-V_{IN}$.

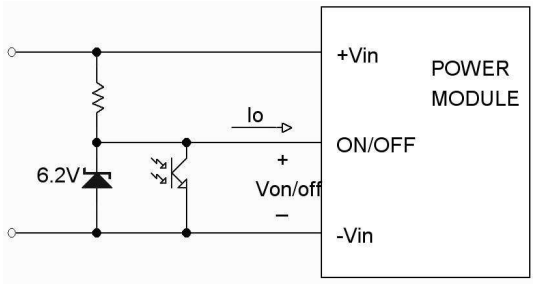
Remote On/Off Implementation



Isolated-Control Remote On/Off



Level Control Using TTL Output



Level Control Using Line Voltage

Heat Sink

Use heat-sink (7G-0020A) for lowering temperature and higher reliability of the module.

Note 2. Typical value at nominal input voltage and full load.

Safety and Installation Instruction

Fusing Consideration

Caution: This converter is not internally fused. An input line fuse must always be used.

This encapsulated converter can be used in a wide variety of applications, ranging from simple stand-alone operation to an integrated part of a sophisticated power architecture. For maximum flexibility, internal fusing is not included; however, to achieve maximum safety and system protection, always use an input line fuse. The safety agencies require a slow-blow fuse with maximum rating of 5A. Based on the information provided in this data sheet on Inrush energy and maximum dc input current; the same type of fuse with lower rating can be used. Refer to the fuse manufacturer's data for further information.

MTBF and Reliability

The MTBF of PXD10-xxWSxx series of DC/DC converters has been calculated using

Bellcore TR-NWT-000332 Case I: 50% stress, Operating Temperature at 40°C (Ground fixed and controlled environment). The resulting figure for MTBF is 1.976×10^6 hours.

MIL-HDBK 217F NOTICE2 FULL LOAD, Operating Temperature at 25℃°C. The resulting figure for MTBF is 1.416×10^6 hours.
