

March 1, 2019

EOL Notification for PSA065-xxxM-R Series

Dear Valued Customer,

Please be advised that the following models will be discontinued, effective March 1, 2019.

- PSA065-120M-R (65W 12V 2x4 Open Frame Power Supply for Medical Applications)
- PSA065-240M-R (65W 24V 2x4 Open Frame Power Supply for Medical Applications)
- PSA065-480M-R (65W 48V 2x4 Open Frame Power Supply for Medical Applications)

Please note that we still have a small number of these models in inventory, that can be sold on a first come, first serve basis. Should there be customer demand beyond available product inventory, Phihong will consider a one-time, last time buy for these models. However, please note that we will have to quote any applicable safety re-certification cost with any last time buy quote.

The last day to place a last time buy order for any of the above models will be May 30, 2019.

As recommended replacement, we have a new "PML065" family of 65w, single output, open frame power supplies that meet IEC/EN/ANSI/AAMI ES 606011 (ED 3.1). Standard available output voltages include; 12v, 15v, 18v, 19v, 24v & 48v. All models are convection cooled and have a very small 2" x 4" footprint.

For more information, please contact your local sales representative, or myself.

Thanks for your interest in Phihong.

Regards,

Best Wishes,

Phihong USA Corporation
