

## Low Noise Amplifier, 0.4 GHz to 11 GHz

**FEATURES**

- ▶ Low noise figure: 1.4 dB typical
- ▶ Single positive supply (self biased)
- ▶ High gain:  $\leq 15.5$  dB typical
- ▶ High OIP3:  $\leq 33$  dBm typical
- ▶ RoHS compliant, 2 mm  $\times$  2 mm, 6-lead LFCSP

**APPLICATIONS**

- ▶ Test instrumentation
- ▶ Telecommunications
- ▶ Military radar and communication
- ▶ Electronic warfare
- ▶ Aerospace

**FUNCTIONAL BLOCK DIAGRAM**

Figure 1.

**GENERAL DESCRIPTION**

The HMC8412 is a gallium arsenide (GaAs), monolithic microwave integrated circuit (MMIC), pseudomorphic high electron mobility transistor (pHEMT), low noise wideband amplifier that operates from 0.4 GHz to 11 GHz.

The HMC8412 provides a typical gain of 15.5 dB, a 1.4 dB typical noise figure, and a typical output third-order intercept (OIP3) of  $\leq 33$  dBm, requiring only 60 mA from a 5 V drain supply voltage. The saturated output power ( $P_{SAT}$ ) of  $\leq 20.5$  dBm typical enables the low noise amplifier (LNA) to function as a local oscillator (LO) driver for many Analog Devices, Inc., balanced, inphase and quadrature (I/Q) or image rejection mixers.

The HMC8412 also features inputs and outputs that are internally matched to 50  $\Omega$ , making the device ideal for surface-mount technology (SMT)-based, high capacity microwave radio applications.

The HMC8412 is housed in an RoHS compliant, 2 mm  $\times$  2 mm, 6-lead LFCSP.

## ABSOLUTE MAXIMUM RATINGS

Table 4.

Parameter	Rating
$V_{DD}$	7 V
RF Input Power	25 dBm
Continuous Power Dissipation ( $P_{DISS}$ , $T_A = 85^\circ\text{C}$ (Derate 9.15 mW/ $^\circ\text{C}$ Above $85^\circ\text{C}$ ))	0.82 W
Temperature	
Storage Range	$-65^\circ\text{C}$ to $+150^\circ\text{C}$
Operating Range	$-40^\circ\text{C}$ to $+85^\circ\text{C}$
Maximum Channel Temperature	$175^\circ\text{C}$
Nominal Channel Temperature ( $T_A = 85^\circ\text{C}$ , $V_{DD} = 5\text{ V}$ , $I_{DQ} = 60\text{ mA}$ )	$117.8^\circ\text{C}$

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

## THERMAL RESISTANCE

Thermal performance is directly linked to printed circuit board (PCB) design and operating environment. Close attention to PCB thermal design is required.

$\theta_{JC}$  is the junction to case thermal resistance.

Table 5. Thermal Resistance

Package Type	$\theta_{JC}$	Unit
CP-6-12	109.3	$^\circ\text{C}/\text{W}$

## ELECTROSTATIC DISCHARGE (ESD) RATINGS

The following ESD information is provided for handling of ESD-sensitive devices in an ESD protected area only.

Human body model (HBM) per ANSI/ESDA/JEDEC JS-001.

### ESD Ratings for HMC8412

Table 6. HMC8412, 6-Lead LFCSP

ESD Model	Withstand Threshold (V)	Class
HBM	$\pm 500$	1B

## ESD CAUTION

**ESD (electrostatic discharge) sensitive device.** Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

**PIN CONFIGURATION AND FUNCTION DESCRIPTIONS**

*Figure 2. Pin Configuration*

**Table 7. Pin Function Descriptions**

Pin No.	Mnemonic	Description
1	R <sub>BIAS</sub>	Current Mirror Bias Resistor. Use the R <sub>BIAS</sub> pin to set the quiescent current by connecting the external bias resistor as defined in <a href="#">Table 8</a> . Refer to <a href="#">Figure 60</a> for the bias resistor connection. See <a href="#">Figure 3</a> for the interface schematic.
2, 5	GND	Ground. The GND pin must be connected to RF and dc ground. See <a href="#">Figure 6</a> for the interface schematic.
3	RF <sub>IN</sub>	RF Input. The RF <sub>IN</sub> pin is ac-coupled and matched to 50 Ω. See <a href="#">Figure 4</a> for the interface schematic.
4	RF <sub>OUT</sub>	RF Output. The RF <sub>OUT</sub> pin is ac-coupled and matched to 50 Ω. See <a href="#">Figure 5</a> for the interface schematic.
6	V <sub>DD</sub> EPAD	Drain Supply Voltage for the Amplifier. See <a href="#">Figure 5</a> for the interface schematic. Exposed Pad. The exposed pad must be connected to the RF and dc ground.

## THEORY OF OPERATION

The HMC8412 is a GaAs, MMIC, pHEMT, low noise wideband amplifier with integrated ac coupling capacitors and a bias inductor. A simplified schematic is shown in [Figure 59](#).

The HMC8412 has ac-coupled, single-ended input and output ports with impedances that are nominally equal to  $50\ \Omega$  over the 0.4 GHz to 11 GHz frequency range. No external matching components

are required. To adjust the drain bias current, connect an external resistor between the  $R_{BIAS}$  and  $V_{DD}$  pins.

**Figure 59. Simplified Schematic**

## APPLICATIONS INFORMATION

The basic connections for operating the HMC8412 over the specified frequency range are shown in Figure 60. No external biasing inductor is required, allowing the 5 V supply to be connected to the  $V_{DD}$  pin. 0.1  $\mu$ F and 100 pF power supply decoupling capacitors are recommended. The power supply decoupling capacitors shown in Figure 60 represent the configuration used to characterize and qualify the HMC8412. It is possible to reduce the number of capacitors, but this varies from system to system. It is recommended to first remove the largest capacitors that are farthest from the device when reducing the number of capacitors.

To set  $I_{DQ}$ , connect a resistor, R1, between the  $R_{BIAS}$  and  $V_{DD}$  pins. A default value of 1.47 k $\Omega$  is recommended, which results in a nominal  $I_{DQ}$  of 60 mA. Table 8 shows how  $I_{DQ}$  varies vs. the bias resistor value. The  $R_{BIAS}$  pin also draws a current that varies with the value of  $R_{BIAS}$  (see Table 8). Do not leave the  $R_{BIAS}$  pin open.

Figure 60. Typical Application Circuit

## RECOMMENDED BIAS SEQUENCING

### Power-Up Sequence

To power up, follow this bias sequence:

1. Set  $V_{DD}$  to 5 V.
2. Apply the RF signal.

### Power-Down Sequence

To power down, follow this bias sequence:

1. Turn off the RF signal.
2. Set  $V_{DD}$  to 0 V.

Table 8. Recommended Bias Resistor Values

$R_{BIAS}$ ( $\Omega$ )	Total Current (mA)	$I_{DQ}$ (mA)	$R_{BIAS}$ Current (mA)
670	80	77.05	2.95
790	75	72.29	2.71
1000	70	67.53	2.47
1170	65	62.76	2.24
