

Features

- 4020 with integrated high quality constant current IC and RGB LED chip.
- Built-in IC, with high precision of constant current and internal RGB chips spectral processing in advance.
- Single line data transmission (return to zero code).
- Specific Shaping Transmit Technology number of LED stacked is not restricted.
- Cascading Enhancement Technology any 2 LED spacing can be up to 10 meters.
- Data transfer rate of 800 kbp/s at 30 frames per second.
- RGB output port PWM control can achieve 256 grey level adjustments.
- Upon powering up, IC performs self-inspection then lights connection on the pin B lamp.
- SA-I Anti-interference patent technology for single line data transmission.
- Built-in power supply reverse connects protection module, reversed power input will not damage the IC.

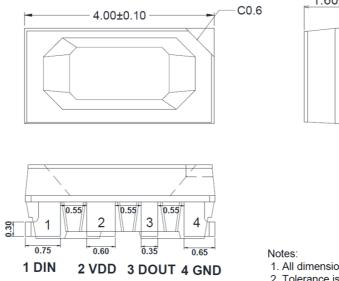

Description

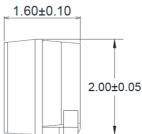

The IN-PI42TAS(X)R(X)G(X)B is 4.0*2.0*1.5mm RGB LED with integrated IC. It is a SMD type LED which can be used in various applications.

Applications

- Full color LED string light
- LED full color module
- LED guardrail tube
- LED scene lighting
- LED point light
- LED pixel screen
- LED shaped screen

Package Outline Dimensions & Pin Configuration

1. All dimensions are in millimeters.

2. Tolerance is $\pm 0.1 \text{mm}$ unless otherwise noted

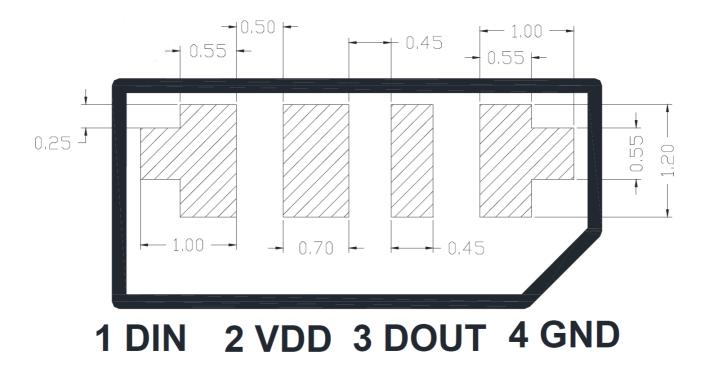

Figure 1. IN-PI42TAS(X)R(X)G(X)B Package Outline Dimensions

Pin Configuration

Number	Symbol	Function Description			
1	DIN	Control data signal input			
2	VDD	Power supply LED			
3	DOUT	Control data signal output			
4	GND Ground				

Recommended Soldering Pad Size

Absolute Maximum Rating (Ta = 25 °C, VSS=0V)

Parameter	Symbol	Range	Unit
Logic supply voltage	Vod	+3.7~+5.5	V
Logic input voltage	VIN	-0.5 ~VDD+0.5	V
Operating temperature	Торт	-40~ +85	°C
Storage temperature	Тѕтд	-40~ +85	°C
ESD pressure (HBM)	Vesd	2K	V
ESD pressure (DM)	Vesd	200	V

LED Characteristics (*Ta* = 25°C)

Color		.S5R5G5B nA)	IN-PI42TASPRPGPB (12mA)				
Color	Wavelength(nm)	Light Intensity(mcd)	Wavelength(nm)	Light Intensity(mcd)			
Red	620-630	50-150	620-630 300-500				
Green	520-535	200-400	515-530	700-1500			
Blue	ue 460-475 50-		460-475	200-300			

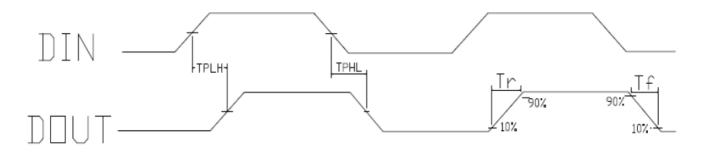

Recommended Operating Ranges (unless otherwise specified, Ta= -20 ~ +70 °C, VDD=4.5 ~ 5.5V, VSS=0V)

Parameter	Symbol	Min.	Тур.	Max	Unit	Test conditions
Supply voltage	V _{DD}	-	5.2	-	V	-
High level input voltage	ViH	0.7*VDD	-	-	V	VDD=5.0V
Low level input voltage	V _{IL}	-	-	0.3*VDD	V	VDD=5.0V
The frequency of PWM	F _{PWM}	-	1.2	-	KHZ	-
Static power consumption	I _{DD}	-	1	-	mA	-

Switching Characteristics (unless otherwise specified, Ta=25 °C)

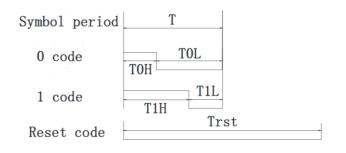

Parameter	Symbol	Min.	Тур.	Max	Unit	Test conditions
The speed of data transmission	F _{DIN}	-	800	-	KHZ	The duty ratio of 67% (data 1)
DOUT transmission delay	T _{PLH}	-	67	-	ns	DIN→DOUT
DOUT transmission delay	T _{PHL}	-	82	-	ns	DIN→DOOT
Out R/B conversion	Tr	-	22	-	ns	IOUT R / B= 5mA/13mA, out R / B port connected
time	T _f	-	75	-	-	with 200 Ω resistor to VDD in series, load capacitance to ground
Out R/B conversion	Tr	-	18	-	ns	IOUT G = $5mA/13mA$, out G port is connected with 200 Ω
time	T_{f}	-	110	-	-	resistor to VDD in series, and the load capacitance to ground is 30pf

Timing Waveforms

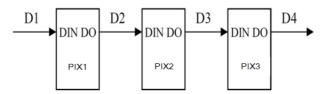

1. Input Code

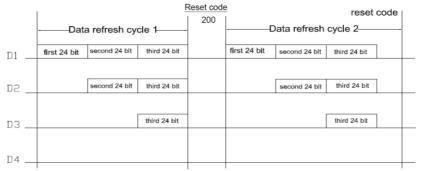

2. The data transmission time (TH+TL=1.25µs±600ns):

Name	Description	Min.	Typ. value	Max.	Unit
Т	Period	1.2	_	-	μs
Т0Н	0 code, high level time	0.2	0.3	0.4	μs
T0L	0 code, low level time	0.8	-	-	μs
T1H	1 code, high level time	0.7	0.9	1.0	μs
T1L	1 code, low level time	0.2	_	_	μs
Trst	Reset code, low level time	200	_	-	μs

3. Connection Scheme

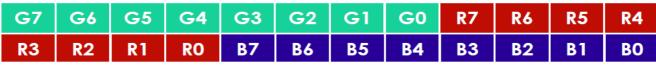

4. Data Transfer Format ($Ta=25^{\circ}C$)

Note: the D1 sends data for MCU, D2, D3, D4 for data forwarding automatic shaping cascade circuit.

5. 24-bit data format

Note: high starting, in order to send data (G7 - G6 -B0)

Typical Application Circuit

5V	•				
Data R1 DIN	VDD	DIN	VDD	DIN	VDD
GND	DOUT	GND	DOUT	GND	DOUT
GND					

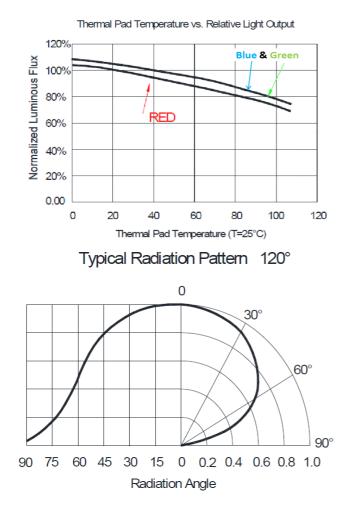

In the practical application circuit, the signal input and output pins of the IC signal input and output pins should be connected to the signal input and output terminals. In addition, to make the IC chip is more stable, even the capacitance between beads is essential back.

Application I: used for soft lamp strip or hard light, lamp beads transmission distance is short, suggested in signal in time the clock line input and output end of each connected in series protection resistors, R1=R2 of about 500 ohms.

Application II: for module or general special-shaped products, lamp beads transmission distance is long, because of different wire and transmission distance, in the signal in time clock at both ends of the line on grounding protection resistance will be slightly different; to the actual use of fixed;

Precautions

Please read the following notes before using the product:

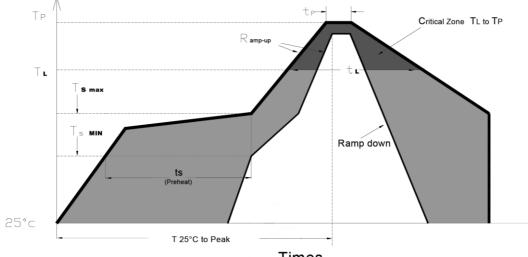

1. Storage

- 1.1 Do not open moisture proof bag before the products are ready to use.
- 1.2 Before opening the package, the LEDs should be kept at 30 $^\circ\!{\rm C}$ or less and 80%RH or less.
- 1.3 The LEDs should be used within a year.
- 1.4 After opening the package, the remaining LEDs should be kept in a resealed bag.
- 1.5 The LEDs require mandatory baking before usage. Baking treatment listed below.
- 1.6 If the moisture adsorbent material has fabled away or the LEDs have exceeded the storage time, baking treatment should be performed using the following conditions.

*Baking treatment: $60\pm5^{\circ}$ C for 24 hours.

2. Soldering Condition Recommended soldering conditions:

Times

Profile Feature	Lead-Free Solder
Average Ramp-Up Rate (Ts _{max} to Tp)	3°C/second max.
Preheat: Temperature Min (Ts _{min})	150° C
Preheat: Temperature Min (Ts _{max})	200 ℃
Preheat: Time (ts $_{min to}$ ts $_{max}$)	60-180 seconds
Time Maintained Above: Temperature (TL)	217 ℃
Time Maintained Above: Time (t $_{L}$)	60-150 seconds
Peak/Classification Temperature (T P)	240 ℃
Time Within 5°C of Actual Peak Temperature (tp)	<10 seconds
Ramp-Down Rate	6°C/second max.
Time 25 $^\circ\!\!C$ to Peak Temperature	<6 minutes max.

Note: Excessive soldering temperature and / or time might result in deformation of the LED lens or catastrophic failure of the LED.

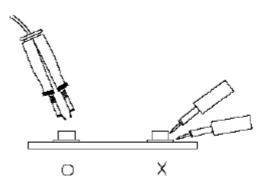

3. Soldering Iron

Each terminal is to go to the tip of soldering iron temperature less than 260° C for 5 seconds within once in less than the soldering iron capacity 25W. Leave two seconds and more intervals, and do soldering of each terminal. Be careful because the damage of the product is often started at the time of the hand solder.

4. Repairing

Repair should not be done after the LEDs have been soldered. When repairing is unavoidable, a double-head soldering iron should be used (as below figure). It should be confirmed beforehand whether the characteristics of the LEDs will or will not be damaged by repairing.

5. Caution in ESD

Static Electricity and surge damages the LED. It is recommended to use a wristband or anti-electrostatic glove when handling the LED. All devices, equipment and machinery must be properly grounded.

DISCLAIMER

INOLUX reserves the right to make changes without further notice to any products herein to improve reliability, function or design. INOLUX does not assume any liability arising out of the application or use of any product or circuit described herein; neither does it convey any license under its patent rights, nor the rights of others.

LIFE SUPPORT POLICY

INOLUX's products are not authorized for use as critical components in life support devices or systems without the express written approval of the President of INOLUX or INOLUX CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury of the user.

2. A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
