

User Manual

ARK-5420 Series

Intel[®] 3rd Generation Core[™] i Processor Based Fanless System with PCIE x 4 & PCI Slot

Attention!

This package contains a hard-copy user manual in Chinese for China CCC certification purposes, and there is an English user manual included as a PDF file on the CD. Please disregard the Chinese hard copy user manual if the product is not to be sold and/or installed in China.

Product Warranty (2 years)

Advantech warrants to you, the original purchaser, that each of its products will be free from defects in materials and workmanship for two years from the date of purchase.

This warranty does not apply to any products which have been repaired or altered by persons other than repair personnel authorized by Advantech, or which have been subject to misuse, abuse, accident or improper installation. Advantech assumes no liability under the terms of this warranty as a consequence of such events.

Because of Advantech's high quality-control standards and rigorous testing, most of our customers never need to use our repair service. If an Advantech product is defective, it will be repaired or replaced at no charge during the warranty period. For outof-warranty repairs, you will be billed according to the cost of replacement materials, service time and freight. Please consult your dealer for more details.

If you think you have a defective product, follow these steps:

- 1. Collect all the information about the problem encountered. (For example, CPU speed, Advantech products used, other hardware and software used, etc.) Note anything abnormal and list any onscreen messages you get when the problem occurs.
- 2. Call your dealer and describe the problem. Please have your manual, product, and any helpful information readily available.
- 3. If your product is diagnosed as defective, obtain an RMA (return merchandise authorization) number from your dealer. This allows us to process your return more quickly.
- 4. Carefully pack the defective product, a fully-completed Repair and Replacement Order Card and a photocopy proof of purchase date (such as your sales receipt) in a shippable container. A product returned without proof of the purchase date is not eligible for warranty service.
- 5. Write the RMA number visibly on the outside of the package and ship it prepaid to your dealer.

Part No. 2001542010 Printed in China Edition 1 August 2015

Technical Support and Assistance

- 1. Visit the Advantech web site at www.advantech.com/support where you can find the latest information about the product.
- 2. Contact your distributor, sales representative, or Advantech's customer service center for technical support if you need additional assistance. Please have the following information ready before you call:
 - Product name and serial number
 - Description of your peripheral attachments
 - Description of your software (operating system, version, application software, etc.)
 - A complete description of the problem
 - The exact wording of any error messages

Warnings, Cautions and Notes

Warning! Warnings indicate conditions, which if not observed, can cause personal injury!

Caution! Cautions are included to help you avoid damaging hardware or losing data.

Notes provide optional additional information.

Note!

A Message to the Customer

Advantech Customer Services

Each and every Advantech product is built to the most exacting specifications to ensure reliable performance in the harsh and demanding conditions typical of industrial environments. Whether your new Advantech equipment is destined for the laboratory, factory floor, or any of a myriad of other uses, you can be assured that your product will provide the reliability and ease of operation for which the name Advantech has come to be known. Your satisfaction is our primary concern. Here is a guide to Advantech's customer services.

To ensure you get the full benefit of our services, please follow the instructions below carefully.

Technical Support

We want you to get the best performance possible from your products. If you run into technical difficulties, we are here to help. For the most frequently asked questions, you can easily find answers in your product documentation. These answers are normally a lot more detailed than the ones we can give over the phone.

So please consult this manual first. If you still cannot find the answer, gather all the information or questions that apply to your problem, and with the product close at hand, call your dealer. Our dealers are well trained and ready to give you the support you need to get the most from your Advantech products. In fact, most problems reported are minor and are easily solved over the phone.

In addition, free technical support is available from Advantech engineers every business day. We are always ready to give advice about application requirements or specific information on the installation and operation of any of our products.

Initial Inspection

Before setting up the system, check that the items listed below are included and in good condition. If any item does not accord with the table, please contact your dealer immediately.

- 1 x ARK-5420 series industrial computer
- 1 x ARK-5420 accessory box
- 1 x Warranty card

If any of these items are missing or damaged, contact your distributor or sales representative immediately. We have carefully inspected the ARK-5420 mechanically and electrically before shipment. It should be free of marks and scratches and in perfect working order upon receipt. As you unpack the ARK-5420, check it for signs of shipping damage. (For examples: box damage, scratches, dents, etc.) If it is damaged or it fails to meet the specifications, notify our service department or your local sales representative immediately. Also, please notify the carrier. Retain the shipping carton and packing material for inspection by the carrier. After inspection, we will make arrangements to repair or replace the unit.

Safety Instructions

- 1. Read these safety instructions carefully.
- 2. Keep this User Manual for later reference.
- 3. Disconnect this equipment from any AC outlet before cleaning. Use a damp cloth. Do not use liquid or spray detergents for cleaning.
- 4. For plug-in equipment, the power outlet socket must be located near the equipment and must be easily accessible.
- 5. Keep this equipment away from humidity.
- 6. Put this equipment on a reliable surface during installation. Dropping it or letting it fall may cause damage.
- 7. The openings on the enclosure are for air convection. Protect the equipment from overheating. DO NOT COVER THE OPENINGS.
- 8. Make sure the voltage of the power source is correct before connecting the equipment to the power outlet.
- 9. Position the power cord so that people cannot step on it. Do not place anything over the power cord.
- 10. All cautions and warnings on the equipment should be noted.
- 11. If the equipment is not used for a long time, disconnect it from the power source to avoid damage by transient overvoltage.
- 12. Never pour any liquid into an opening. This may cause fire or electrical shock.
- 13. Never open the equipment. For safety reasons, the equipment should be opened only by qualified service personnel.
- 14. If one of the following situations arises, get the equipment checked by service personnel:
 - The power cord or plug is damaged.
 - Liquid has penetrated into the equipment.
 - The equipment has been exposed to moisture.
 - The equipment does not work well, or you cannot get it to work according to the user's manual.
 - The equipment has been dropped and damaged.
 - The equipment has obvious signs of breakage.
- 15. DO NOT LEAVE THIS EQUIPMENT IN AN ENVIRONMENT WHERE THE STORAGE TEMPERATURE MAY GO BELOW -20° C (-4° F) OR ABOVE 60° C (140° F). THIS COULD DAMAGE THE EQUIPMENT. THE EQUIPMENT SHOULD BE IN A CONTROLLED ENVIRONMENT.
- 16. CAUTION: DANGER OF EXPLOSION IF BATTERY IS INCORRECTLY REPLACED. REPLACE ONLY WITH THE SAME OR EQUIVALENT TYPE RECOMMENDED BY THE MANUFACTURER, DISCARD USED BATTERIES ACCORDING TO THE MANUFACTURER'S INSTRUCTIONS.

The sound pressure level at the operator's position according to IEC 704-1:1982 is no more than 70 dB (A).

DISCLAIMER: This set of instructions is given according to IEC 704-1. Advantech disclaims all responsibility for the accuracy of any statements contained herein.

Safety Precaution - Static Electricity

Follow these simple precautions to protect yourself from harm and the products from damage.

- To avoid electrical shock, always disconnect the power from your PC chassis before you work on it. Don't touch any components on the CPU card or other cards while the PC is on.
- ESD (electrostatic discharge) can cause either catastrophic or latent damage in sensitive electronic components. Take appropriate measures to ensure that any accumulated body charge is removed before accessing electronic devices. A static-safe workbench is ideal.

Battery Information

Batteries, battery packs, and accumulators should not be disposed of as unsorted household waste. Please use the public collection system to return, recycle, or treat them in compliance with the local regulations.

ARK-5420 User Manual

Overview

- Sections include:
- Introduction
- Specifications
- Power Information
- Environment Specifications
- Dimension Diagram

1.1 Introduction

The ARK-5420 is a fanless, compact embedded industrial computer chassis with Core[™] dual core processor and wide voltage input range. This powerful computing platform supports 24-hour-a-day, 7-day-a-week operation.

1.2 Specifications

- Processor and Chipset: Core[™] processor + Intel[®] HM76 chipset
- BIOS: AMI SPI 64 Mb Flash
- Memory: On-board 4 GB DDR3 1333/1600 MHz
- Display: Integrated graphics HD4000, with up to 256 MB SDRAM shared system memory
- Dual Display:
 - Single display resolution up to 2048 x 1536 @ 60 Hz
 - Dual Display resolution up to 1920 x 1200 @ 60 Hz
- Storage: Supports 1 x 2.5" SSD Tray, 1 x Easy-swap CF Tray, 1 x mSATA socket on board
- Expansion Slot: 1 x Mini PCIe slot, 1 x PCI slot, 1 PCIE x 4 slot
- **Ethernet:** 2 x 10/100/1000M Ethernet (Controller chip: Intel i210-IT)
- USB:
 - 3 x USB2.0 with Type A
 - 2 x USB3.0 with Type A
- VGA: 1 x VGA
- HDMI: 1 x HDMI
- Serial I/O: 2 x DB9, RS232/422/485 with automatic flow control
- Digital I/O: 1 x 8-ch GPIO
- Audio: 1 x Speaker out with 2 x 4 w amplifer,1 Mic input; DB9 type Reserved Zone (Real I/O panel):
 - 1 x PCI expansion slot
 - 1 x PCIE x 4 slot
 - 1 x LVDS
- Dimensions (W x H x D):
 - 210 x 129 x 240 mm (without ears)
 - 253 x 133 x 240 mm (with ears)
- Weight: 4.5 kg

1.3 Power Information

ARK-5420 supports 9 V ~ 36 VDC input.

Table 1.1: Power					
DC voltage input	9 V - 36 V	7.2 A - 1.8 A			
DC power interface	2-pin terminal block				

1.4 Environmental Specifications

- Operating Temperature: -20 ~ 60° C with 0.7 m/sec air flow: with 1 x Industrial SSD without PC expansion boards (Advantech Lab test specification)
- Safety Certificate: UL, CCC, BSMI, CE and FCC compliant
- **Temperature:** $0 \sim 50^{\circ} \text{ C}$
- **Storage Temperature:** -40 ~ 85° C
- Humidity: 95% @ 40° C, non-condensing
- Vibration:
 - With Compact Flash: 2 Grms @ 5 ~ 500 Hz, random, 1 hr/axis;
 - With 2.5" HDD: 0.5 Grms @ 5 ~ 500 Hz, random, 1 hr/axis; IEC60068-2-6 Sine 2 G @ 5 ~ 500 Hz, 1 hr/axis
- Shock:
 - With Compact Flash: 20 G, IEC-68-2-27, half-sine wave, 11 ms duration
 - With 2.5" HDD: 10 G, IEC-68-2-27, half-sine wave, 11 ms duration

ARK-5420 User Manual

Hardware installation

- Sections include:
- Introduction
- Jumpers and Connectors
- I/O Connectors

2.1 Introduction

The following sections show the internal jumper settings and the external connectors and pins assignment for applications.

2.2 Jumpers and Connectors

2.2.1 Jumper Description

You may configure the ARK-5420 to match the needs of your application by setting jumpers. A jumper is a metal bridge used to close an electric circuit. It consists of two metal pins and a small metal clip (often protected by a plastic cover) that slides over the pins to connect them. To close a jumper, you connect the pins with the clip. To open a jumper, you remove the clip. Sometimes a jumper will have three pins, labeled 1, 2 and 3. In this case you would connect either pins 1 and 2, or 2 and 3.

The jumper settings are schematically depicted in this manual as follows.

A pair of needle-nose pliers may be helpful when working with jumpers. If you have any doubts about the best hardware configuration for your application, contact your local distributor or sales representative before you make any changes. Generally, you simply need a standard cable to make most connections.

2.2.2 Jumper and Connector Location

The board has a number of connectors and jumpers that allow you to configure your system to suit your application. The table below lists the function of each of the connectors and jumpers. The locations of jumpers and connector on the board are shown in Figure 2.1.

Figure 2.1 Jumper and Connector Location on Main Board

Figure 2.3 ARK-5420 Rear I/O Interfaces

Figure 2.4 ARK-5420 Front I/O Interfaces

Chapter 2 Hardware installation

2.3.1 COM Connector

ARK-5420 provides two D-sub 9-pin connectors for RS-232/422/485. The default setting is RS-232.

2.3.2 HDMI Connector

Table 2.7: HDMI Connector Pin Definition							
Pin	Signal Name	Signal Name	Signal Name				
1	TMDS Data2+	11	TMDS Clock Shiled				
2	TMDS Data2 Shiled	12	TMDS Clock-

8	TMDS Data0 Shiled	18	+5V Power				
9	TMDS Data0-	19	Hot Plug Detect				
10	TMDS Clock+						

2.3.3 VGA Connector

ARK-5420 offers one D-sub 15-pin female connector, which supports max. resolution of 2048 x 1563.

Table 2.8: VGA Connector Pin Definition			
Pin	Signal Name	Pin	Signal Name
1	Red	9	+5V
2	Green	10	GND
3	Blue	11	NC
4	NC	12	DDC-DATA
5	GND	13	H-SYNC
6	GND	14	V-SYNC
7	GND	15	DDC-CLK
8	GND		

2.3.4 USB 2.0 Connector

ARK-5420 provides four USB interface connectors, which are USB EHCI, Rev. 2.0 compliant. The USB interface can be disabled in the system BIOS setup.

Table 2.9: USB2.0 Connector Pin Definition			
Pin	Signal Name	Pin	Signal Name
1	+V5(VCC)	3	USB DATA+
2	USB DATA-	4	GND

2.3.5 USB 3.0 Connector

ARK-5420 provides two USB interface connectors, which are USB XHCI, Rev. 3.0 compliant. The USB interface can be disabled in the system BIOS setup.

Table 2.10: USB3.0 Connector Pin Definition			
Pin	Signal Name	Pin	Signal Name
1	+V5(VCC)	6	StdA_SSRX+
2	D-	7	GND_DRAIN
3	D+	8	StdA_SSTX-
4	GND	9	StdA_SSTX+
5	StdA_SSRX-		

2.3.6 DIO Connector

ARK-5420 provides one 8-bit DIO, D-sub 9-pin male connector without isolation protection.

$$\left[O_{9}^{5} \underbrace{\bullet \bullet \bullet \bullet}_{6}^{1} O\right]$$

Table 2.11: DIO Connector Pin Definition

1	GPIO0	6	GPIO4
2	GPIO1	7	GPIO5
3	GPIO2	8	GPIO6
4	GPIO3	9	GPIO7
5	GND		

2.3.7 Audio in Connector

ARK-5420 provides one integrated Mic-in/speaker out audio connector with DB9 type.

2.3.8 LAN(M12, A-coded, 8-pin, Female)

ARK-5420 provides 3 10/100/1000M Ethernet with M12 A-coded.

Table 2.12: Eth	nernet Port Pin Defin	ition
Pin	Signal Name	Signal Name

2.3.9 Power Input

ARK-5420 provides 24V/48V/72V/110V DC voltage input.

Table 2.13: Power Connector Pin Definition		
Pin	Signal Name	
1	Positive	
2	GND	

System Setup

- Sections include:
 Installing Mainboard mini-PCle card and mini SATA
 Installing USB Dongle
- Installing HDD Module
- Installing Foot Stand
- Installing Notes

3.1 Introduction

The following procedures will instruct you to install all modules into the ARK-5420 system.

3.1.1 Installing Mainboard mini-PCIe Card and m-SATA

- 1. ARK-5420mainboard has a Mini PCIe slot and a m-SATA slot. Each one has a label for users to distinguish.
- 2. Insert mini-PCIe card and mSATA card to the respective slot and fix with two screws.

Figure 3.1 Installing Mainboard Mini-PCIe Card and m-SATA

3.1.2 Installing PCI Card and PCIE Card

ARK-5420 provides 1 PCI slot & 1 PCIE x 4 slot for customized expansion.

- 1. Remove screws from outside of the chassis.
- 2. Remove the Top Cover.
- 3. Assemble I/O bracket with PCI card & PCIE x 4 card.
- 4. Add the Top Cover.

Figure 3.2 Installing PCI Card & PCIE Card

3.1.3 Installing HDD Module and Easy-swap CF Module

The ARK-5420 reserves a space for 2.5" HDD module and CF module. And its design is benefit for customers to assemble or disassemble storage without tools.

3.1.3.1 Installing CF Module

- 1. Fix CF module board onto CF tray.
- 2. Insert the CF card into CF module board and fix it with fixed plastic shell.
- 3. Place CF tray onto HDD bracket and secure it with the screws.
- 4. Insert the CF module.

Figure 3.3 Installing CF Module

3.1.3.2 Installing HDD Module

- 1. Fix 4 rubbers to HDD bracket.
- 2. Place 2.5" HDD into HDD bracket and tighten with screws.
- 3. Assemble HDD bracket to HDD door.
- 4. Connect HDD to SATA cable.
- 5. Tighten up HDD door on chassis with hand locking screw.

Figure 3.4 Installing HDD Module

3.1.4 Installing Foot Stand

Align the foot stands with the screw holes in the chassis side panel, and secure them with screws.

3.1.5 Installing FAN module (optional function)

If customer use the high power card for PCI & PCIE slot, just like POE card, we reserved the FAN module for the machine heat dissipation.

- 1. Remove the Top Cover.
- 2. Remove FAN bracket.
- 3. Assemble FAN on the chassis with screw.
- 4. Use 1700023422-01 to connect the INV CON on MB and FAN.
- 5. Add the Top Cover.

Figure 3.6 Installing FAN module

BIOS Setting

4.1 Introduction

This chapter introduces how to configure BIOS for ARK-5420 series. The ARK-5420 Series system has AMI BIOS built in, with an Aptio SETUP utility that allows users to configure required settings or to activate certain system features.

The Aptio SETUP saves the configuration in the BIOS flash of the motherboard. When the power is turned off.

When the power is turned on, press the button or <F2> button during the BIOS POST (PowerOn Self Test) to access the Aptio SETUP screen.

Table 4.1: Aptio Setup Control Keys		
KEY	Function	
$<$ \leftarrow $>$ $<$ \rightarrow >	Select desired screen	
< ↑ >< ↓ >	Select desired item	
< Enter >	Engage item to make settings

4.2 Entering Setup

Press or <F2> to enter AMI BIOS Aptio Setup Utility, the Main Menu will appear on the screen. Use arrow keys to select among the items and press <Enter> to accept or enter the sub-menu.

4.2.1 Main Setup

The Main BIOS setup screen has two main frames. The left frame displays all the options that can be configured. Grayed-out options cannot be configured; options in blue can. The right frame displays the key legend.

Above the key legend is an area reserved for a text message. When an option is selected in the left frame, it is highlighted in white. Often a text message will accompany it.

BIOS Information		Choose the system

Figure 4.1: Main Setup Screen

System Language

English: DEFAULT

Use these options to change the system language.

System Time / System Date

System Time DEFAULT: 01 / 01 / 2012

System Date DEFAULT: 00:00:00

Use this option to change the system time and date. Highlight System Time or System Date using the <Arrow> keys. Enter new values through the keyboard. Press the <Tab> key or the <Arrow> keys to move between fields. The date must be entered in MM/DD/YY format. The time must be entered in HH:MM:SS format.

4.2.2 Advanced BIOS Features Setup

Select the Advanced tab from the ARK-5420 setup screen to enter the Advanced BIOS Setup screen. You can select any of the items in the left frame of the screen, such as CPU Configuration, to go to the sub menu for that item. You can display an Advanced BIOS Setup option by highlighting it using the <Arrow> keys. All Advanced BIOS Setup options are described in this section. The Advanced BIOS Setup screen is shown below. The sub menus are described on the following pages.

Figure 4.6: CPU Configuration (1)

Figure 4.7 CPU Configuration (2)

Hyper Threading

This item allows users to enable or disable Intel[®] Hyper Threading Technology. The default setting is "Enabled".

Active Processor Core

This item allows users to choose how many processor cores to activate when using a dual- or quad-core processor. The default setting is "All".

Limit CPUID Maximum

This item allows users to set the limit value for CPUID. The default setting is "Disabled".

Execute Disable Bit

This item is a hardware feature introduced by Intel[®] in its new generation CPU. It can help the CPU to self-protect in event of hostile attack based on buffer overflow, so as to avoid the virus attack, such as blasting wave. The default setting is "Enabled".

Hardware Prefectcher

This item allows users to enable or disable Hardware Prefetcher Technology. The default setting is "Enabled".

Adjacent Cache Line Prefetch

This item allows users to enable or disable sequential access to memory. The default setting is "Enabled".

Intel[®] Virtualization Technology

This item is a system virtualization technology adopted in CPUs produced by

Intel[®]. It allows multiple operating systems to run simultaneously on the same system. It adopts Vanderpool Technology, which allows multiple systems to run on the same system and applications can run in their own individual space. The default setting is "Enabled".

Figure 4.9: USB Configuration

Legacy USB Support

This item allows users to enable support for traditional USB. It will be automatically set as "Disabled" when no USB device is connected. The default setting is "Enabled".

USB 3.0 Support

This item allows users to enable or disable USB 3.0 (XHCI). The default setting is "Enabled".

XHCI Hand-off

This item is to enable or disable function of supporting OS without XHCI Handoff feature. The default setting is "Enabled".

EHCI Hand-off

This item is to enable or disable function of supporting OS without EHCI Handoff feature. The default setting is "Disabled".

USB Mass Storage Driver Support

This item allows users to set the specific type of the connected USB device.

USB Device Power-up Delay

This item allows users to enable or disable the function of USB device reporting max. delay time to host controller. The default setting is "Disabled".

 Max TOLUD
 - This item is used to set Memory Max TOLUD and default setting is "Dynamic".
- MRC Fast Boot

This item is used to set MRC Fast Boot.

Scrambler Seed Generation off

This item is used to set Scrambler Seed Generation Off and default setting is "Disabled".

Memory Remap

This item is used to set memory remap.

Memory Alias Check

This item is used to set "Memory alias Check" function and default is "Disabled".

4.2.3.6 GT- Power Management Control

RC6 (Render Standby)

This item is used to set RC6 (Render Standby) function and default setting is "Enabled".

RC6+(Deep RC6)

This item is used to set RC6+ (Deep RC6) function and default setting is "Enabled".

GT Over Clocking Support

This item is used to set GT OverClocking support function and default is "Disabled".

4.2.4 Boot Setup

Figure 4.26: Boot Setup

4.2.4.1 Boot Configuration

Setup Prompt Timeout

This item is the waiting time of pressing Setup button. If Setup button is not pressed within the setting time, system will continue to boot.

Bootup NumLock State

This item allows users to active Bootup NumLock State function after the system is power on to DOS. The default setting is "On".

On: NumLock function is on when system boots.

Off: Keypad is set for cursor control arrows when system boots.

Quiet Boot

If set to "Disabled", BIOS will display normal POST information; if set to "Enabled", BIOS will show OEM icon rather than POST information.

Fast Boot

This item allows BIOS to skip some testing procedures during booting so as to reduce system boot-up time. The default setting is "Disabled".

This item is used to set Administrator Password.

User Password

This item is used to set User Password.

4.2.6 Save & Exit Setup

Figure 4.30: Setup Save & Exit Menu

Save Changes and Exit

When you have completed system configuration, select this option to save your changes, exit BIOS setup and reboot the computer so the new system configuration parameters can take effect.

1.Select Save Changes and Exit from the Exit menu and press <Enter>. The following message appears:

Save Configuration Changes and Exit Now? [Ok] [Cancel]

2.Select Ok or Cancel.

Discard Changes and Exit

Select this option to quit Setup without making any permanent changes to the system configuration.

1.Select Exit Discard Changes and Exit from the Exit menu and press <Enter>. The following message appears:

Discard Changes and Exit Setup Now? [Ok] [Cancel]

2.Select Ok to discard changes and exit.

Save Changes and Reset

When you have completed system configuration, select this option to save your changes, exit BIOS setup and reboot the computer so the new system configuration parameters can take effect.

1.Select Save Changes and Reset and press <Enter>. The following message appears:

Save configuration and Reset? [Yes] [No]

2.Select Ok or Cancel.

Discard Changes and Reset

Select this option to quit Setup without making any permanent changes to the system configuration.

1.Select Discard Changes and Reset from the Exit menu and press <Enter>. The following message appears: Discard Changes and Reset Setup New?

Discard Changes and Reset Setup Now?

[Ok] [Cancel]

2. Select Ok to discard changes and exit.

Save Changes

This item allows users to save changes done so far to any of the options.

Discard Changes

This item allows users to discard changes done so far to any of the options.

- Restore Defaults This item allows users to restore/load default values for all the options.
- Save as User Defaults

This item allows users to save the changes done so far as user defaults.

Restore User Defaults

This item allows users to restore the user defaults to all the options.

Boot Override

This item allows users to set boot device.

Launch EFI Shell from file system device This item allows booting of EFI shell from system file device.

Chapter 5

Driver Installation

Sections include:

- Chipset Windows Driver Setup
- VGA Windows Driver Setup
- ME Windows Driver Setup
- LAN Windows Driver Setup
- USB 3.0 Windows Driver Setup
- Audio Windows Driver Setup

5.1 Introduction

Advantech offers a complete range of Device Driver and software supports for Windows programming developers. You can apply the Windows Device Drivers to the most popular Windows Programming tools, such as Visual C++, Visual Basic, Borland C++ Builder and Borland Delphi.

Here Windows 7 is taken as an example.

5.2 Driver Installation

Insert the driver CD into your system's CD-ROM drive. You can see the ITA-5730 driver folder items.

ARK-5420 User Manual

GPIO Programming

This chapter introduces GPIO programming Guide. Please carefully read and study the below screenshots and source codes in blue. Please download programming specifications for the PCA955 NXP semiconductor.

6.1 ARK-5420 Digital DIO Definition

See Section 2.3.6.

6.2 Configuration Sequence

ARK-5420's GPIO is realized through PCA9554 GPIO IC connected to ICH SMBUS. Therefore, the configuration and access to GPIO IC is completed by IO Space accessing ICH SMBUS controller.

Below is the diagram of ICH SMBUS IO Space:

SMB_BASE + Offset	Mnemonic	Register Name	Default	Туре
00h	HST_STS	Host Status	00h	R/WC, RO, R/WC (special)
02h	HST_CNT	Host Control	00h	R/W, WO R/W
03h	HST_CMD	Host Command	00h	R/W
04h	XMIT_SLVA	Transmit Slave Address	00h	R/W
05h	HST_D0	Host Data 0	00h	R/W
06h	HST_D1	Host Data 1	00h	R/W

For ARK-5420, IO address of the above SMB_BASE is 0xF040.

The detailed SMBUS IO control access code, please refer to Chapter 3.

The corresponding SMBUS slave address of PCA9554 of GPIO 00 - GPIO 07 on ARK-5420 is 0x40 (8bit address):

GPIO 00 - GPIO 07: PCA9554 0x40 (IO0 - IO7)

Below are pinouts for PCA9554:

Table 6.1: Pin Description							
Symbol	Pin	Description					
	DIP16, SO16, SSOP16, TSSOP16	HVQFN16	SSOP20				
A0	1	15	6	address input 0			
A1	2	16	7	address input 1			
A2	3	1	9	address input 2			
100	4	2	10	input/output 0			
IO1	5	3	11	input/output 1			
102	6	4	12	input/output 2			
103	7	5	14	input/output 3			
Vss	8	6	15	supply ground			
104	9	7	16	input/output 4			
105	10	8	17	input/output 5			
106	11	9	19	input/output 6			
107	12	10	20	input/output 7			
INT	13	11	1	interrupt output (open- drain)			

Below is the diagram of PCA9554 register:

Table 6.2	Table 6.2: Command Byte					
Command	Protocol	Function				
0	read byte	Input Port register				
1	read/write byte	Output Port register				
2	read/write byte	Polarity Inversion register				
3	read/write byte	Configuration register				

The command byte is the first byte to follow the address byte during a write transmission. It is used as a pointer to determine which of the following registers will be written or read.

PCA9554 has in all 4 registers to control GPIO.

Register 0 - Input Port register

This register is a read-only port. It reflects the incoming logic levels of the pins, regardless of whether the pin is defined as an input or an output by Register 3. Writes to this register have no effect.

The default 'X' is determined by the externally applied logic level, normally '1' when no external signal externally applied because of the internal pull-up resistors.

Tab	Table 6.3: Register 0 - Input Port Register Bit Description									
Bit	Symbol	Access	Value	Description						
7	17	read only	Х							
6	16	read only	Х							
5	15	read only	Х							
4	14	read only	Х							
3	13	read only	Х	- determined by externally applied logic level						
2	12	read only	Х	—						
1	11	read only	Х							
0	10	read only	Х							

If one GPIO Pin is set to Input, you can read input value from the bit that register 0 corresponds to.

Register 1 - Output Port register

This register reflects the outgoing logic levels of the pins defined as outputs by Register 3. Bit values in this register have no effect on pins defined as inputs. Reads from this register return the value that is in the flip-flop controlling the output selection, **not** the actual pin value.

Table 6.4: Register 1 - Output Port Register Bit Description							
Bit	Symbol	Access	Value	Description			
7	07	R	1*				
6	O6	R	1*	 reflects outgoing logic levels of pins defined as outputs by Register 3 			
5	O5	R	1*				
4	04	R	1*				
3	O3	R	1*				
2	02	R	1*				
1	01	R	1*				
0	00	R	1*				

If one GPIO Pin is set to Output, you can read input value from the bit that register 1 corresponds to.

Register 2 - Polarity Inversion register

This register allows the user to invert the polarity of the Input Port register data. If a bit in this register is set (written with '1'), the corresponding Input Port data is inverted. If a bit in this register is cleared (written with a '0'), the Input Port data polarity is retained.

Table 6.5: Register 2 - Polarity Inversion Register Bit Description							
Bit	Symbol	Access	Value	Description			
7	N7	R/W	0*	inverts polarity of Input Port register data			
6	N6	R/W	0*	0 = Input Port register data retained (default value)			
5	N5	R/W	0*	1 = Input Port register data inverted			
4	N4	R/W	0*				
3	N3	R/W	0*				
2	N2	R/W	0*				
1	N1	R/W	0*				
0	N2	R/W	0*				

If one GPIO Pin is set to Input, you can control the polarity of input pin from the bit that register 2 corresponds to.

Register 3 - Configuration register

This register configures the directions of the I/O pins. If a bit in this register is set, the corresponding port pin is enabled as an input with high-impedance output driver. If a bit in this register is cleared, the corresponding port pin is enabled as an output. At reset, the I/Os are configured as inputs with a weak pull-up to VDD.

Table 6.6: Register 3 - Configuration Register Bit Description							
Bit	Symbol	Access	Value	Description			
7	C7	R/W	1*	configures the directions of the I/O pins			
6	C6	R/W	1*	0 = corresponding port pin enabled as an output			
5	C5	R/W	1*	1 = corresponding port pin configured as input			
4	C4	R/W	1*				
3	C3	R/W	1*				
2	C2	R/W	1*				
1	C1	R/W	1*				
1	C0	R/W	1*				

Register 3 is used to set each GPIO as Input or Output:

If the bit is '0', the corresponding GPIO pin is set as Output; If the bit is '1', the corresponding GPIO pin is set as Input.

Example:

Take ARK-5420 as an example. Assume GPIO 00 is set as Output and GPIO 7 is set as Input, with two pins interconnected, how to set the corresponding register? GPIO 00 corresponds to PCA9554 0x40 IO0, while GPIO 07 corresponds to PCA9554 0x40 IO7.

Set GPIO 00 as Output:

- 1. Read SMBUS slave 0x40 register 3 byte value;
- 2. Set bit 0 of the value read in step 1 as 0 and write it to SMBUS slave 0x40 register 3;
- 3. Read SMBUS slave 0x40 register 1 byte value;
- 4. Set bit 0 of the value read in step 3 as 0 or 1 according to low or high of the output value, then write it back to SMBUS slave 0x40 register 1.

Set GPIO 07 as Input:

- 1. Read SMBUS slave 0x40 register 3 byte value;
- Set bit 7 of the value read in step 1 as 1 and write it to SMBUS slave 0x40 register 3;
- 3. Read SMBUS slave 0x40 register 0 byte value;
- 4. Decide low or high of the input value through bit7 value read in step3.

6.3 Function Call for Reference

ICH SMBUS Access Code

(The following code is realized by simulating the access of BIOS to SMBUS. It uses Borand C++ 3.1 for compiling and is successfully tested under DOS (So far, it is not tested under other OS).

#define SMBUS_PORT 0xF040//SMB_BASE?0xF040
typedefunsigned char BYTE;

BYTE smbus_read_byte(BYTE addr, BYTE offset)

// Read SMBUS Register byte value. Read one byte value each time. addr is slave address (such as $0x40)\,,$ and offset is register offset.

```
int i;
BYTE data;
```

{

outportb(SMBUS_PORT + 4, (addr | 1));// Write slave address to SMB_BASE + 4 (When reading, bit 0 of slave address should be set as 1, so here addr|1 is available)

```
newiodelay();//delay
newiodelay();//delay
```

chk_smbus_ready();// Whether SMBUS is ready

```
outportb(SMBUS_PORT + 3, offset);// Write register off-
set to SMB_BASE + 3
     newiodelay();//delay
     newiodelay();//delay
     outportb(SMBUS PORT + 2, 0x48);// Write SMBUS command to
SMB_BASE + 2. 0x48 means starting byte data transmission
     newiodelay();//delay
     newiodelay();//delay
     for (i = 0; i <= 0x100; i++)
      {
         newiodelay();//longer delay
      }
     chk_smbus_ready();//Whether SMBUS is ready
     return(inportb(SMBUS_PORT + 5));// Byte value read from
SMB_BASE + 5
}
void
     smbus write byte(BYTE addr, BYTE offset, BYTE value)
// Write SMBUS Register byte value. Write one byte value each
time. addr is slave address (such as 0x40), and offset is
register offset.
{
     int i;
     outportb(SMBUS_PORT + 4, addr);// Write slave address to
SMB_BASE + 4 (When writing, slave address bit 0 should be set
as 0)
     moredelay();//longer delay
     moredelay();//longer delay
     chk_smbus_ready();//Whether SMBUS is ready
     outportb(SMBUS_PORT + 3, offset);// Write register off-
set to SMB_BASE + 3
     moredelay();//longer delay
     moredelay();//longer delay

    outportb(0xeb, 0);//IO port 0xeb No real device occu-
pies. Write a value to this port can realize delay function.
You can also choose other method according to the real situa-
tion.
}
void moredelay()
//Longer delay
{
    int i;
    for (i = 0; i < 20; i++)
    ł
```
```
outportb(0xeb, 0);//IO port 0xeb No real device
occupies. Write a value to this port can realize delay func-
tion. You can also choose other method according to the real
situation.
      }
}
******
GPIO Simcodes
(Here GPIO 00 and GPIO 07 in Chapter 2 are taken as examples)
Output High to GPIO 00:
      data = smbus_read_byte(0x40, 0x03);// Read slave 0x40
register 3 byte
      data &= 0xfe;//bit 0 is set as 0
      smbus_write_byte(0x40, 0x03, data)//Write back. GPIO 00
is set for output
      data = smbus_read_byte(0x40, 0x01)//Read
                                               slave
                                                       0x40
register 1
      data |= 0x01;//bit 0 is set as 1 which stands for high
      smbus_write_byte(0x40, 0x01, data)//Write back. Output
high value
Read Input Value from GPIO 07:
      data = smbus_read_byte(0x40, 0x03);//Read
                                               slave
                                                       0x40
register 3 byte
      data |= 0x80;//bit 7??1
      smbus_write_byte(0x40, 0x03, data)//Write back. GPIO 07
is set for input
      data = smbus_read_byte(0x40, 0x00)//Read
                                              slave
                                                       0x40
register 0. Then, the response value of bit 7 should know
whether the input is low or high
```

ARK-5420 User Manual

Programming the Watchdog Timer

A.1 Programming the Watchdog Timer

The ARK-5420's watchdog timer can be used to monitor system software operation and take corrective action if the software fails to function within the programmed period. This section describes the operation of the watchdog timer and how to program it.

A.1.1 Watchdog Timer Overview

The watchdog timer is built into the super I/O controller SMSC SCH3114. It provides the following user-programmable functions:

- Can be enabled or disabled via user program
- Timer can be set from 1 to 255 seconds or 1 to 255 minutes
- Generates an interrupt or resets signal if the software fails to reset the timer
- before time-out

A.1.2 Programming the Watchdog Timer

The I/O port address of the watchdog timer is 680h (hex).

Table A.1: Watchdog Timer Registers		
Address: 680h (hex) Register	Read/ Write	Description
65 (hex)	write	Set seconds or minutes as units for the timer. Write 0 to bit 7: set second as counting unit. [default] Write 1 to bit 7: set minutes as counting unit.
66 (hex)	write	0: Stop timer [default] 01~FF (hex): The amount of the count, in seconds or min- utes, depends on the value set in register 65 (hex). This number decides how long the watchdog timer waits for strobe before generating an interrupt or reset signal. Writing a new value to this register can reset the timer to count with the new value.
67 (hex)	read/ write	Configure watchdog timer Bit 1:Write 1 to enable keyboard to reset the timer, 0 to dis- able. [default] Bit 2: Write 1 to enable mouse to reset the timer, 0 to dis- able.[default] Bit 7~4: Set the interrupt mapping of watchdog timer: 1111=IRQ15
		0011=IRQ3 0010=IRQ2 0001=IRQ1 0000=Disable [default]
68 (hex)	read/ write	Control watchdog timer Bit0: Read watchdog state; 1=Timer timeout Bit2: Write 1 to immediately generate timeout signal, and automat- ically return to 0 (Write only). Bit3: Writer 1 to allow triggering of timer timeout when P20 is effec- tive, 0 to disable. [default]

A.1.3 Example Program

_____ Enable watchdog timer and set 10 sec. as timeout interval. 1 Mov dx, A65h ; Select register 65h, watchdog timer I/O port address 680h+ register shifts 65h Mov al,80h ; Set second as counting unit Out dx,al Mov dx,A66h ; Select register 66h, watchdog timer I/O port address 680h+ register shift 66h Mov al,10 ; Set timeout interval as 10 seconds and start counting Out dx,al :-----Enable watchdog timer and set 5 min. as timeout interval. 2. . Mov dx, A65h ; Select register 65h, watchdog timer I/O port address 680h+ register shifts 65h Mov al,00h ; Set minute as counting unit Out dx,al 680h Mov dx, A66h ; Select register 66h, watchdog timer I/O port address 680h+ register shifts 66h Mov al,5 ;Set timeout interval as 5 minutes and start counting Out dx,al Enable watchdog timer to be reset by mouse. 3. -----Mov dx, A67h ; Select register 67h, watchdog timer I/O port address 680h+ register shifts 67h In al,dx Or al,4h ; Enable watchdog timer to be reset by mouse Out dx,al -----4. Enable watchdog timer to be reset by keyboard. Mov dx, A67h ; Select register 67h, watchdog timer I/O port address 680h+ register shifts 67h In al,dx Or al, 2h ; Enable watchdog timer to be reset by keyboard Out dx,al :-----5. Generate a time-out signal without timer counting. ;-----

```
Mov dx,A68h ; Select register 68h, watchdog timer I/O port
address 680h+ register shifts 68h
In al,dx
Or al,4h ; Generate a time-out signal
Out dx,al
;------
```
