= NOTES=

* 1: ( ): Peak Output Current is possible at 170~265VAC input range , operating period at Peak Output Current is less than 10sec, duty less than 35% .
Average output power and current is less than Maximum Output Power and Maximum Output Current.

* 2 : At Maximum Output Power, nominal input voltage, Ta = 25°C.

* 3 : For cases where conformance to various safety specs (UL, CSA, EN) are required, to be described as 100 - 240VAC, 50 / 60Hz on name plate.

* 4 : First/second inrush current, not applicable for the in-rush current to Noise Filter for less than 0.2ms.

* 5 : Please refer to Fig A for measurement point of ripple and noise.
Ripple & noise are measured at 20MHz by using a twisted pair of load wires terminated with a 0.1uF and 47uF capacitor.

* 6 : Measure line & load regulation at output terminal M4 tapped point.

* 7 : 85 - 265VAC, constant load.

* 8 : No load - Full load (Maximum power), constant input voltage.

* 9 : Constant current limit with automatic recovery.
Avoid to operate at overload or dead short for more than 30 seconds.

* 10: OVP circuit will shutdown output, manual reset (Remote ON/OFF control reset or Re-power on).

* 11: Measured by each measuring method of UL, CSA, EN and DENAN (at 60Hz), Ta=25°C.
Worst case: < 0.3mA at 264VAC, 63Hz (Normal Condition); < 0.5mA (Single Fault Condition)

* 12: Refer to Output Derating Curve (PA578-01-02_) for details of output derating versus ambient temperature.
- Load (%) is percent of Maximum Output Power and Maximum Output Current (Item 2 and 3).
Do not exceed derating of Maximum Output Power and Maximum Output Current.
- 100% load start up at -40°C is possible. However, it may not fulfil all the specifications.

* 13: Category 4 exposure levels: Trunk transportation over U.S. highways, Composite two-wheeled trailer.

* 14: As for DENAN, designed to meet at 100VAC.
