Product Change Notice – APMN-Q551

5/5/2017

As part of the transition to the CE Radio Equipment Directive (RED), an improvement is being made to our Airborne Product Line base module 9373 which is used in the final assembly of product APMN-Q551. This improvement concerns the 5.0 GHz radio adaptivity covered under EN 301-893 and will prevent interference with neighboring networks. Incorporation of this improvement required a minor change to our radio chip programming. It is transparent to users and does not affect the Airborne Product Firmware or the configuration for your device. The new radio chip firmware is revision is 3.1.64.50.

No action is required on your part. This change is being instituted automatically on all units produced after this date. The VER-RADIO command can be used at the CLI to determine the radio firmware loaded in any particular device. Date of production is also included on the module label.

Ordering SKU

DD = Day, 1-31

M= Month, January – September = 1 – 9, October = A,
November = B, December = C

Y = Year, 7= 2017

An updated CE Declaration of Conformity will be provided separately.

Best Regards,

Brian Foster | Product Manager
