

Notes

We will not include a power cord, please choose a suitable form according to your country.

We will not include a 3V RTC battery (CR1220)

We have already installed JetPack 4.6 system, the login password is 'nvidia'.

The USB-C connector in the kit is supported USB-C 3.0 function with a FPC convert port.

The connectors in the kit are not quite similar to the official board. We highly recommend to CONFIRM the datasheet or purchase sample product first before deploying it in your projects.

The jetpack system comes pre-loaded with the drivers needed to run the product. If you need to install your own image, please reinstall the driver to make the USB port and SD card slot work.
