Note 2: Definition of optical measurement system

The optical characteristics should be measured in a dark room with ambient temperature  $T_a=+25^{\circ}\text{C}$ . The optical properties are measured at the center point of the LCD screen after 5 minutes operation. (Equipment: Photo detector TOPCON BM-7 Field of view:  $1^{\circ}$ /Height: 500mm.)

Fig. 3 Optical measurement system setup

Note 3: Definition of response time

The response time is defined as the LCD optical switching time interval between "White" state and "Black" state. Rise time ( $T_{on}$ ) is the time between photo detector output intensity changed from 90% to 10%, and fall time ( $T_{off}$ ) is the time between photo detector output intensity changed from 10% to 90%.

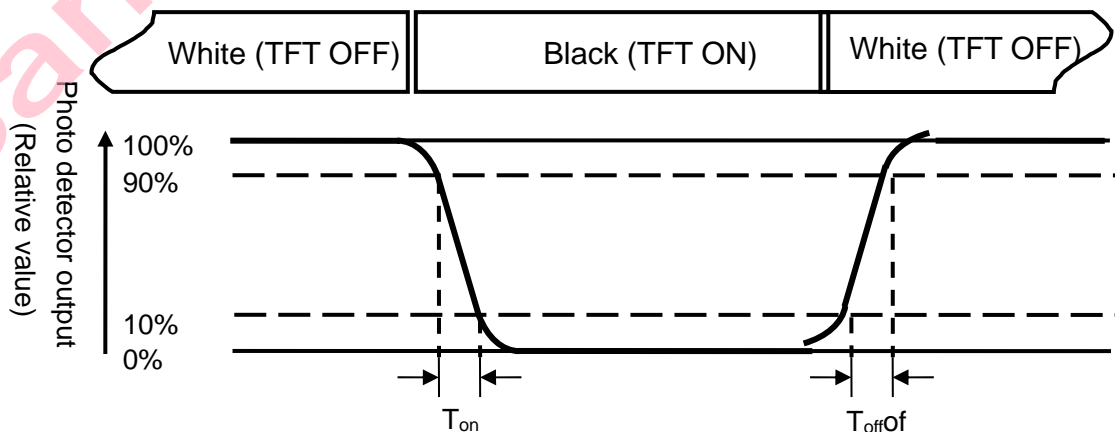

Fig. 4 Definition of response time

Note 4: Definition of contrast ratio

$$\text{Contrast ratio (CR)} = \frac{\text{Luminance measured when LCD on the "White" state}}{\text{Luminance measured when LCD on the "Black" state}}$$

Note 5: Definition of luminance

Measured at the center area of the panel when LCD panel is driven at “white” state.

Note 6: Definition of color chromaticity (CIE1931)

Color coordinates measured at the center point of LCD when panel is driven at “White”, “Red”, “Green” and “Blue” state respectively.

Note 7: Definition of luminance uniformity

To test for uniformity, the tested area is divided into 3 rows and 3 columns. The measurement spot is placed at the center of each circle as below.

$$\text{Luminance Uniformity (U}_L\text{)} = \frac{L_{\min}}{L_{\max}}$$

L-----Active area length

W----- Active area width

Fig. 5 Definition of luminance uniformity

$L_{\min}$  : The measured minimum luminance of all measurement position.

$L_{\max}$  : The measured maximum luminance of all measurement position.

Note 8: Definition of flicker

Flicker is the pattern usually used to describe the visual sensation produced by a rapidly varying light intensity. There should be no visible flicker in normal direction of the display when the following figure are loaded. The figure is composed of interlaced black and white lines.

Fig.6 Flicker checker pattern

Note 9: Definition of crosstalk

There should be no visible in normal direction of the display when the following figures are loaded.
